a Systemic Illness***

***Depression as a Systemic Illness Oct 12 2019
Although depression has been long considered an
exclusively mental disorder, this book highlights the
importance of recognizing it as a
systemic--physical--illness. The chapters herein
present key findings from research on animal
models before proceeding on to examine the
"allostatic" load that depression bears on the body,
commonly observed patterns of depression, and
illnesses that it is likely to adversely effect--through
mechanisms other than that of non-compliance with
treatment. The authors also explore various
diagnostic dilemmas including symptom-driven,
phenomenologic approaches, and discuss drug-
drug interactions and the use of unique electronic
health records as collaborating agents to the
physician. Depression as a Systemic Illness
emphasizes the need for the primary care physician
to be the first agent to care for "garden variety"***

depressive disorders and the need to alter medical school and residency training to accommodate the development of the necessary skills, knowledge and attitudes to fulfill this goal. Its unique approach and presentation of depression makes it a key resource for clinicians within the fields of both psychiatry and primary care medicine.

Integrative Dermatology Jul 01 2021 This title combines conventional treatment options with time tested alternative treatment options for skin disorders. By integrating the best of Western and Eastern medicine, it aims to broaden the armamentarium of clinicians treating skin diseases.

Decision Making in Perioperative Medicine: Clinical Pearls Jan 27 2021 Minimize risk for every surgery-bound patient with this concise, high-yield clinical reference With new surgical advances and innovations, more older, sicker, higher-risk patients are undergoing surgery. Expertly assessing and managing patients with comorbidities who are undergoing surgical procedures is an absolutely critical task today—and Decision Making in Perioperative Medicine: Clinical Pearls will ensure that you make the right decisions through every step of the process. Which risk calculator should you use? How long should you delay surgery after percutaneous coronary intervention? Should the

patient continue taking aspirin? How long before surgery should you stop a direct-acting oral anticoagulant? Decision Making in Perioperative Medicine: Clinical Pearls answers your questions when it comes to perioperative care. Filled with algorithms, tables, and clinical pearls, this practical resource is organized into three sections: Key takeaways on preoperative evaluation, testing, anesthesia, and medication management Expert guidance on evaluating the effect of comorbidities on surgical outcome and providing strategies for medical optimization to minimize risk Review of common postoperative medical complications and treatment Whether you're a hospitalist, internist, family physician, anesthesiologist, physician assistant, or nurse practitioner, Decision Making in Perioperative Medicine: Clinical Pearls provides the evidence-based information and insights you need to make sure every surgery-bound patient receives the quality of care and management they deserve.

Liberatory Psychiatry Aug 22 2020 Confronts the psychological impact of social changes, and explores the liberatory potential of psychiatry.

RISE Manual Oct 16 2022 This manual was written

for Residents by Residents at SUNY Downstate-Health Sciences University and its Affiliated Hospitals. The RISE Manual will provide essential information for Internal Medicine residency training and information to prepare you for the next step of your medical education.

Cardio-Nephrology Dec 14 2019 Extending from the outpatient management of cardiovascular and kidney disease, to hospital-based decision making in patients with cardio-renal disease and complex interfaces such as hemodialysis in patients with ventricular assist device support, this book serves as a single reference point for cardiology and nephrology clinicians and researchers dealing with the significant overlap areas between these two specialties. Chapters cover the physiology, biomarkers, therapeutic agents and full spectrum of these comorbidities and feature separate sections on cardiovascular and CKD evaluations, stratification of kidney transplant patients, lipid management in CKD, interventional strategies and hypertension. Leaders in cardiology, nephrology, hypertension and lipidology bring together the latest evidence with their collective clinical experience into this invaluable resource. This textbook is an essential resource for physicians and allied professionals practicing cardiology, nephrology,

students and physician trainees, to deepen their understanding of this crucial field.

Not Just Bad Kids Mar 29 2021 Not Just Bad Kids: The Adversity and Disruptive Behavior Link explores the theory that all behavior makes sense in context. If you understand a person's frame of reference – their background, history and experience – you can imagine what might be driving their behavior. The book describes the social, cultural and environmental factors that shape the lives of many youths, including early childhood attachment which sets the foundation for how they interact with authority figures. The book also delves into an explanation of conduct disorder which is characterized by persistent, repetitive behaviors that violate the basic rights of other human beings and break rules. Studies have shown that conduct disorder affects 1-4% of adolescents in the United States and oppositional defiant disorder is estimated to develop in approximately 10.2% of children. The presence of DBD is also known to be more prevalent in boys than it is in girls. As there is a growing need to understand why children and adolescent exhibit signs of hostility, defiance and isolation, this book is an ideal resource for this timely topic. Encompasses both ODD and conduct disorder Introduces readers to the social, cultural and environmental factors that

***play a crucial part in disruptive behavior
Demonstrates the interrelationship of attachment problems, chronic trauma and disruptive behavior
Discusses current best practices for intervention and treatment in youth with disruptive behaviors
Provides casework examples of patients with disruptive behavior disorder***

The Epidemiology of Aging Sep 22 2020 The average age of the world's population is increasing at an unprecedented rate and this increase is changing the world. This "Silver tsunami" emphasizes the need to provide advanced training in epidemiology and increase the cadre of experts in the study of aging. This book is designed to summarize unique methodological issues relevant to the study of aging, biomarkers of aging and the biology/physiology of aging and in-depth discussions of the etiology and epidemiology of common geriatric syndromes and diseases. Contributing authors in the book represent many disciplines, not only epidemiology and clinical geriatrics, but also demography, health services, research, cardiovascular disease, diabetes, psychiatry, neurology, social services, musculoskeletal diseases and cancer. The aim of the book is to provide a broad multidisciplinary background for any student/researcher interested in

aging. The material in the book is organized and comprehensive. It represents the most up-to-date information on the scientific issues in aging research written by academics who specialize in research and training in the broad field of aging. The structure and organization of the book reflects our course series in the Epidemiology of Aging starting with the broad issues of demography and methodology, and then addressing specific health conditions and geriatric conditions common to older persons.

Handbook of Neuroanesthesia Oct 24 2020

Thoroughly updated for its Fourth Edition, this handbook is a complete, convenient, and practical guide to perioperative management of neurosurgical patients. In a quick-reference outline format, the book provides detailed instructions on anesthetic management during all neurosurgical and neuroradiologic procedures and on intensive care of neurosurgical patients and patients with head injury. This edition covers new developments in interventional neuroradiology, treatment of cerebral and spinal cord ischemia, awake craniotomy, and therapies for children with central nervous system diseases. New material is also included on acute treatment of stroke, brain death, and management of brain-dead patients during harvest of donated

organs.

Caring for the Newborn Mar 17 2020 "This book summarizes the state of cognoscibility regarding normal newborn care that has been accumulated over the past centuries, especially the 20th and now 21st century. The preface/introduction details historical concepts that have followed newborns over the millennia of Homo sapiens sapiens' existence, such as infanticide, breast feeding, swaddling, neonatal resuscitation, and principles of caring for newborns. The mortality rate of newborns has been reduced in many parts of the world in the past two centuries, and we have learned much about how to keep increasing numbers of newborns alive and healthy. This is especially seen when healthcare providers and society collaborate in this important endeavor that includes emphasizing known preventive principles. Current modern pediatric and perinatal treatments allow newborns in the current 21st century America to have a start on an overall life expectancy of 78.5 years (up to 76 years in males and 80.9 years in females) if they receive meticulous medical care, and even if they are born into a penurious state. Such deserved care and inevitable medical discoveries will only lengthen these life trajectories. This second edition updates principles of caring for the newborn that were identified in the

first edition. It considers the newborn examination, newborn screening, safe-sleep concepts, mother and newborn skin-to-skin contact, effects of prenatal drug use, mental health issues in the newborn, maternal mood disorders, infant feeding, circumcision, anticipatory guidance, and concepts of surgery in the newborn. Also considered are selective disorders found in some newborns that includes newborn neurology, cardiology, pulmonology, nephrology, gastroenterology, endocrinology and dermatology"--

Evidence-Informed Nursing Jan 07 2022 This introductory text to evidence-based practice provides nurses and other health professionals with a clear idea of why they should use research information as a basis for high-quality patient care and how they should use that information in the clinical setting. In a logical progression which helps the student build knowledge systematically the text looks at: *the rationale for evidence-based care *what research is and approaches to it *the benefits of research to clinical practice *critical appraisal skills *reflective practice and decision-making *how to put research into practice *the importance of research dissemination A summary of essential points to remember is included at the end of each chapter and the text is firmly grounded in the clinical

context. This book provides an indispensable reference guide suitable for use at all levels of training and practice.

The Genetics of Alcoholism Jun 12 2022 This volume provides an in-depth look at the genetic influences that contribute to the development of alcoholism. Part I: Epidemiologic Studies contains five chapters that examine the various approaches employed in the study of the genetics of alcoholism. It provides a historical perspective and details all the essentials of this subject. Part II: Selective Breeding Studies highlights the results of research involving the selective breeding of rodents. This type of research has produced homogenous strains exhibiting specific behavioral responses considered significant in the development and maintenance of alcohol dependence. The studies presented in Part III: Phenotypic Studies investigate and analyze phenotypic markers that serve as correlates to the genotypic determinants of alcoholism. Through its broad scope, this volume provides for the first time a panoramic view of the knowledge available on the hereditary influences of alcoholism.

Principles and Practice of Geriatric Surgery May 11 2022 Principles and Practice of Geriatric Surgery

presents the fundamentals of surgical care for the fastest growing segment of the US population, providing a vital integration of operative strategies with the physiological changes of aging. Among the topics covered are the endocrine system, otolaryngology, respiratory system, cardiovascular system, GI system, hepatobiliary system, urogenital system, soft tissue and musculoskeletal system, neurosurgery, and transplantation.

Pediatric Dialysis Dec 06 2021 The provision of optimal dialysis therapy to children requires a thorough understanding of the multi-disciplinary manner in which the pediatric patient is affected by renal insufficiency. Knowledge of the technical aspects of peritoneal dialysis, hemodialysis and continuous renal replacement therapy must be complemented by attention to issues such as anemia, renal osteodystrophy, hypertension, growth, cognitive development, nutrition, nursing care and the psychosocial adaptation of the child and family to chronic disease. The inaugural edition of Pediatric Dialysis provides a comprehensive review of these and other related topics with a singular emphasis on the unique aspects of their application to children. With authoritative, clinically relevant, well-referenced chapters written by a host of recognized international experts who emphasize key aspects of

contemporary management, Pediatric Dialysis has been designed to serve as a primary resource to all clinicians involved in the care of the pediatric dialysis patient.

***Developing a Strategy for the Future Dec 18 2022
Report on Heart Disease and Stroke Aug 14 2022
Sleights of Mind Aug 02 2021 What can magic tell us about ourselves and our daily lives? If you subtly change the subject during an uncomfortable conversation, did you know you're using attentional 'misdirection', a core technique of magic? And if you've ever bought an expensive item you'd sworn never to buy, you were probably unaware that the salesperson was, like an accomplished magician, a master at creating the 'illusion of choice'. Leading neuroscientists Stephen Macknik and Susana Martinez-Conde meet with magicians from all over the world to explain how the magician's art sheds light on consciousness, memory, attention, and belief. As the founders of the new discipline of NeuroMagic, they combine cutting-edge scientific research with startling insights into the tricks of the magic trade. By understanding how magic manipulates the processes in our brains, we can better understand how we work - in fields from law and education to marketing, health and psychology - for good and for ill.***

[pt. 2]. Apr 10 2022***

State University of New York Jul 13 2022

Urban Family Medicine Nov 05 2021 Now, more than ever, Family Medicine is alive and well in the United States. The base of this medical specialty has traditionally been in the smaller cities, suburban communities, and rural areas of this country. Over the past decade, however, there has been a resurgence of interest in primary care in our major metropolitan areas as a solution to the high tech subspecialty pace of the tertiary care environment. A rebirth of urban family medicine has accompanied these pioneering efforts. To date, the accomplishments are substantial and the prospects are bright. There is still a long way to go and there are a significant number of hurdles to cross.

Although diseases are generally the same wherever you are, their effects as illness on the individual and the family are strongly influenced by the environment and social milieu. Urban families have distinctive and diverse problems-cultural, economic, and ethnic. Training programs situated in the large cities must recognize these issues and include special emphasis on the situations that the family physician is likely to encounter during and after his training. There is very little research literature on the

background and nature of special urban problems and these areas are the subject of several chapters of this long overdue volume devoted specifically to urban family medicine. Dr. Birrer has persuaded true experts to share their knowledge with the reader.

The Language of Pain Jan 15 2020 A doctor who himself suffered through an excruciating bone-marrow transplant aims to transform our understanding of and ability to communicate pain through his deft mixture of compelling personal stories and artwork from patients, along with insights from some of our greatest thinkers, writers and artists.

The Long Fix Nov 12 2019 It may not be a quick fix, but this concrete action plan for reform can create a less costly and healthier system for all. Beyond the outrageous expense, the quality of care varies wildly, and millions of Americans can't get care when they need it. This is bad for patients, bad for doctors, and bad for business. In The Long Fix, physician and health care CEO Vivian S. Lee, MD, cuts to the heart of the health care crisis. The problem with the way medicine is practiced, she explains, is not so much who's paying, it's what we are paying for. Insurers, employers, the government, and individuals pay for every procedure, prescription, and lab test, whether or not it makes us

better—and that is both backward and dangerous. Dr. Lee proposes turning the way we receive care completely inside out. When doctors, hospitals, and pharmaceutical companies are paid to keep people healthy, care improves and costs decrease. Lee shares inspiring examples of how this has been done, from physicians' practices that prioritize preventative care, to hospitals that adapt lessons from manufacturing plants to make them safer, to health care organizations that share online how much care costs and how well each physician is caring for patients. Using clear and compelling language, Dr. Lee paints a picture that is both realistic and optimistic. It may not be a quick fix, but her concrete action plan for reform—for employers and other payers, patients, clinicians, and policy makers—can reinvent health care, and create a less costly, more efficient, and healthier system for all.

SUNY Downstate Medical Center Evidence Based Medicine Course Jan 19 2023

Death of a Scholar Sep 03 2021 This is a story about murder, politics, race relations, religion and medicine. It is a memoir which relates to medical care in the United States, the public hospital system and how religion and race interact in our society. It criticizes parts of our legal system and how it impacts our daily lives.

Inpatient Dermatology Feb 14 2020 ??? Inpatient Dermatology is a concise and portable resource that synthesizes the most essential material to help physicians with recognition, differential diagnosis, work-up, and treatment of dermatologic issues in the hospitalized patient. Complete with hundreds of clinical and pathologic images, this volume is both an inpatient dermatology atlas and a practical guide to day-one, initial work-up, and management plan for common and rare skin diseases that occur in the inpatient setting. Each chapter is a bulleted, easy-to-read reference that focuses on one specific inpatient dermatologic condition, with carefully curated clinical photographs and corresponding histopathologic images to aid readers in developing clinical-pathologic correlation for the dermatologic diseases encountered in the hospital. Before each subsection the editors share diagnostic pearls, explaining their approach to these challenging conditions. This book is structured to be useful to physicians, residents, and medical students. It spans dermatology, emergency medicine, internal medicine, infectious disease, and rheumatology. Inpatient Dermatology is the go-to guide for hospital-based skin diseases, making even the most complex inpatient dermatologic issues approachable and understandable for any clinician.

Doctors' Marriages May 19 2020 Responding to demographic changes among physicians and six years of new experiences since the first edition, Dr. Myers has revamped his well received work. He includes new information on older physicians, gay and lesbian physicians, medical student abuse, economic strain on interns, depression, malpractice, ethical violations, and other stressors which may cause marital difficulties. Therapists seeking to council symptomatic physicians, as well physicians themselves, will find this a humane, readable, and useful book.

A Framework for Educating Health Professionals to Address the Social Determinants of Health Apr 29 2021 The World Health Organization defines the social determinants of health as "the conditions in which people are born, grow, work, live, and age, and the wider set of forces and systems shaping the conditions of daily life." These forces and systems include economic policies, development agendas, cultural and social norms, social policies, and political systems. In an era of pronounced human migration, changing demographics, and growing financial gaps between rich and poor, a fundamental understanding of how the conditions and circumstances in which individuals and populations exist affect mental and physical health is imperative.

Educating health professionals about the social determinants of health generates awareness among those professionals about the potential root causes of ill health and the importance of addressing them in and with communities, contributing to more effective strategies for improving health and health care for underserved individuals, communities, and populations. Recently, the National Academies of Sciences, Engineering, and Medicine convened a workshop to develop a high-level framework for such health professional education. A Framework for Educating Health Professionals to Address the Social Determinants of Health also puts forth a conceptual model for the framework's use with the goal of helping stakeholder groups envision ways in which organizations, education, and communities can come together to address health inequalities.

Disability Studies for Human Services Feb 25 2021 Delivers knowledge critical to understanding the multidimensional aspects of working with varied populations with disabilities This is the only introduction to disability book with an interdisciplinary perspective that offers cross-disability and intersectionality coverage, as well as a special emphasis on many unique populations. Comprehensive and reader-friendly, it provides current, evidence-based knowledge on the key

principles and practice of disability, while addressing advocacy, the disability rights movement, disability legislation, public policy, and law. Focusing on significant trends, the book provides coverage on persistent and emerging avenues in disability studies that are anticipated to impact a growing proportion of individuals in need of disability services. Woven throughout is an emphasis on psychosocial adaptation to disability supported by case studies and field-based experiential exercises. The text addresses the roles and functions of disability service providers. It also examines ethics in service delivery, credentialing, career paths, cultural competency, poverty, infectious diseases, and family and lifespan perspectives. Reinforcing the need for an interdisciplinary stance, each chapter discusses how varied disciplines work together to provide services addressing the whole person. Active learning is promoted through discussion boxes, self-check questions, and learning exercises. Faculty support includes PowerPoints, model syllabi, test bank, and instructor manual. Purchase includes digital access for use on most mobile devices or computers. Key Features: Provides readers with key knowledge and skills needed to effectively practice in multidisciplinary settings Offers interdisciplinary

perspectives on conceptualization, assessment, and intervention across a broad range of disabilities and client populations Underscores the intersectionality of disability to correspond with trends in education focusing on social justice and underrepresented populations Includes research and discussion boxes citing current research activities and excerpts from noted experts in various human service disciplines Promotes active learning with discussion boxes, multiple-choice questions, case studies with discussion questions, and field-based experiential exercises Includes instructor manual, sample syllabi, PowerPoint slides, and test bank Identifies key references at the end of chapters and provides resources for additional information Purchase includes digital access for use on most mobile devices or computers.

SUNY Downstate Medical Center Alumni Directory, 1979-80 Nov 17 2022

***Report Card on Brooklyn's Health Apr 17 2020
Psychotherapy for Psychosis Dec 26 2020 In this innovative book, master clinician Michael Garrett shows how to weave together cognitive-behavioral therapy (CBT) and psychodynamic therapy to support the recovery of persons suffering from psychosis. This integrated framework builds on the strengths of both methods to achieve lasting gains,***

even for patients with severe, chronic mental illness. The therapist is guided to use CBT to help the patient recognize the literal falsity of delusions, while employing psychodynamic strategies to explore the figurative truth and personal meaning of psychotic symptoms. Extended case presentations and numerous clinical vignettes illustrate Garrett's compassionate, empowering approach. Winner (Second Place)--American Journal of Nursing Book of the Year Award, Psychiatric and Mental Health Nursing Category

One Hundred Days Sep 15 2022 It is a situation we all fear and none of us can imagine: a life-threatening diagnosis. But what if the person receiving the diagnosis--young, physically fit, poised for a bright future--is himself a doctor? At thirty-one David biro has just completed his residency and joined his father's successful dermatology practice. Struck with a rare blood disease that eventually necessitates a bone marrow transplant, Biro relates with honesty and courage the story of his most transforming journey. He is forthright about the advantages that his status as a physician may have afforded him; and yet no such advantage can protect him from the anxiety and doubt brought on by his debilitating therapies. The pressures that Biro's wild "one hundred days" brings to bear on his heretofore

well-established identity as a caregiver are enormous--as is the power of this riveting story of survival.

Suny Downstate Medical Center Feb 20 2023 In 1860, the nation's first college-hospital was founded in Brooklyn. Initially called the Long Island College Hospital, Collegiate Division, this innovative institution was the first to bring controversial, cuttingedge methods of teaching to the study of medicine in the United States. Until this time, medical students had been taught exclusively in schools, rarely leaving the lecture hall for first-hand experience. With the belief that medical instruction should be brought to the hospital bedside, the renowned institution that became SUNY Downstate Medical Center was founded, changing the course of medical instruction forever. In 2000, on its 140th anniversary, SUNY Downstate is celebrated for its innovative teaching practices and superior instructors and equipment. Now the largest medical school in New York State, SUNY Downstate prepares about 1,500 students per year for careers in medicine, nursing, and the allied health professions. SUNY Downstate Medical Center is an incredible new volume that includes not only photographs but also announcements, bulletins, degrees, theses, and countless other memories from the last 140 years.

The Physician as Patient Nov 24 2020 Because physicians are shaped by the expectations and responsibilities of their profession and are especially susceptible to stress and illness, professionals treating them need to be attuned to a host of demands and considerations not applicable to other patients. The Physician as Patient meets that need by combining the perspectives of two seasoned psychiatrists who have been assessing and treating physicians for more than 30 years. Drs. Myers and Gabbard pool their career-long dedication to physician health, counseling, and risk management to demonstrate that, through accurate diagnosis and state-of-the-art treatment, most impaired physicians can recover and return to practice. As the most current sourcebook available on this subject, The Physician as Patient not only discusses common illnesses and problems seen in doctors but also outlines the many biopsychosocial treatments that are indicated -- always with an emphasis on integrated care. It considers such issues as the reluctance of physicians to assume the role of patient and the uniqueness of the physician's psychological makeup that facilitates or impedes diagnosis and treatment. It describes the most common medical and psychiatric illnesses in physicians -- including addictions -- and addresses

personality disorders and the increasingly important subject of boundary violations. And it helps readers determine what can be done about doctors behaving badly or out-of-character, or what strategies are useful in treating physicians to assure accuracy while also diminishing morbidity and relieving suffering. Among other key issues raised are: The importance of considering sociocultural customs and values when treating the increasing number of minority and International Medical Graduate physicians Addressing the many clinical, humanistic, ethical, and legal dimensions of the psychiatric evaluation of physicians Distinguishing between long-standing patterns of personality disorders that manifest as disruptive behaviors and those patterns that lead to burnout and depression Assessing amenability to rehabilitation in cases of sexual boundary violation, including an awareness of alcohol or drug abuse as contributing factors Utilizing a physician's predisposition as a learner and pragmatist to enter into cognitive behavior therapy The success of early diagnosis and treatment in lowering the occurrence of suicide, for which physicians are notoriously at risk Brimming with case examples, The Physician as Patient adopts a reader-friendly style that facilitates quick grasp of concepts, while an extensive list of references and

websites provides an entrée for additional support. This book is an indispensable resource for all mental health professionals who take caregivers into their care.

Schizophrenia and Psychoses in Later Life Mar 09 2022 A state-of-the-art overview of schizophrenia and psychosis in later life, translating present-day knowledge into clinical practice.

Parkinson's Disease and Nonmotor Dysfunction Oct 04 2021 Parkinson's Disease and Nonmotor Dysfunction fills a major gap in the current rapidly growing body of knowledge concerning Parkinson's disease. Drs. Pfeiffer and Bodis-Wollner have correctly perceived that many nonmotor features of Parkinson's disease are given insufficient attention in the medical literature. Unfortunately, they are often also given insufficient attention by the practicing neurologists who see these patients. As recently pointed out, there is clearly much more to Parkinson's disease than depletion of the nigrostriatal dopamine system (1). Parkinson's disease (not just m- tiple system atrophy) is a multisystem disorder, both pathologically and in its clinical manifestations. This is clearly true for the various motor system abnormalities, which are not fully corrected by dopamine replacement therapy strategies, but also for the nonmotor system

abnormalities that are the subject of this volume. Although recently there has been increased awareness of the cognitive, psychiatric, and sleep disorders commonly associated with Parkinson's disease, many of their manifestations remain under-recognized and their importance in managing patients is underestimated. Even less attention is paid to the myriad of other nonmotor disturbances that plague these patients. For example, among the autonomic disorders, although orthostatic hypotension is well recognized, it is usually attributed to dopaminergic medications rather than to effects of the underlying disease. Urologic disorders are also very familiar in these patients, but may not be properly understood or well managed.

Atlas of Pediatric Emergency Medicine Feb 08 2022
A practical hands-on tool for fast, accurate clinical diagnosis in pediatric emergencies Pediatric patients can represent as much as 15-35% of all Emergency Department visits. Atlas Of Pediatric Emergency Medicine comes to the rescue of harried ED clinicians, providing a quick-access sourcebook packed with visual clues to infant/child injuries and illnesses presenting in emergency situations. Doctors Shah and Lucchesi have combined an extraordinary number of the clearest and best clinical photographs and imaging examples with

practical, straightforward text. It's a winning combination that expedites both diagnosis and the appropriate procedures for dealing with pediatric trauma and disease. Atlas Of Pediatric Emergency Medicine puts at your fingertips: 700 top-quality color clinical photographs -- plus 100 imaging studies that include X-rays, CT scans and more -- making it the single most comprehensive visual compilation available for diagnosing pediatric emergencies Comprehensive coverage of disorders of all body systems Authoritative, experienced guidance. It's been edited, compiled and largely written by two distinguished experts -- one a physician peer-evaluated as one of the finest clinicians and teachers in Emergency Medicine today, the other the overseer of one of the largest, busiest EDs in the United States Consistent formatting designed to provides immediate access to clinical features, differential diagnosis, consultation, treatment and disposition, complications, and clinical pearls A superb preparation tool for board exams and subspecialty certification, and an unparalleled resource for every medical professional, from ED clinicians and physicians in family or pediatric practice to Nurse Practitioners and Paramedics
