Manual de Enfermedades Infecciosas y Terapia Antimicrobiana Aug 08 2021 Este Manual va dirigido a los alumnos del Máster en Enfermedades Infecciosas & Terapia Antimicrobiana de la Universidad Internacional

de La Rioja (UNIR). El temario se adapta al programa del título universitario y complementa las clases online emitidas en directo ('streaming') con otros recursos docentes, en forma de vídeos, páginas web y foros virtuales. Es nuestro deseo que este texto sea una referencia en lengua española para los numerosos graduados en Medicina, Farmacia, Biología y Enfermería que están formándose o ya trabajan en unidades de enfermedades infecciosas y salud pública. En España no está reconocida de forma oficial la especialidad de enfermedades infecciosas, de modo que no existe un MIR de infectología. Aspiramos a que este texto actualizado y al que han contribuido expertos de toda la geografía española, sea el libro de consulta para todos los profesionales sanitarios interesados en la patología infecciosa. Los autores son todos profesores universitarios y gozan de una amplia experiencia docente. Por otro lado, el Manual tiene un marcado carácter clínico y está orientado al tratamiento antimicrobiano. El temario comprende 80 temas, que abordan de forma exhaustiva y actualizada los principales síndromes clínicos infecciosos. A continuación se abordan por separado las patologías más frecuentes causadas por bacterias, hongos, virus y parásitos. En una sección aparte, se describen las infecciones características de grupos de población especiales (viajeros, gestantes, inmunodeprimidos, etc.). Por último, se actualizan los tratamientos antimicrobianos y las vacunas. Agradeceremos los comentarios

que puedan hacernos llegar los lectores. Los tendremos en cuenta para futuras ediciones. Pretendemos que este Manual sea un pilar fundamental para la formación de especialistas en enfermedades infecciosas en lengua española. El buen manejo de las personas infectadas es el mejor reconocimiento al esfuerzo que supone la edición de esta obra. Vicente Soriano, en nombre de los autores

[Hospital-Based Health Technology Assessment](#) Feb 02 2021 A timely work describing how localized hospital-based health technology assessment (HB-HTA) complements general, 'arms-length' HTA agency efforts, and what has been the collective global impact of HB-HTA across the globe. While HB-HTA has gained significant momentum over the past few years, expertise in the field, and information on the operation and organization of HB-HTA, has been scattered. This book serves to bring this information together to inform those who are currently working in the field of HTA at the hospital, regional, national or global level. In addition, this book is intended for decision-makers and policy-makers with a stake in

determining the uptake and decommissioning of new and established technologies in the hospital setting. HTA has traditionally been performed at the National/Regional level by HTA Agencies, typically linked to governments. Yet hospitals are the main entry door for most health technologies (HTs). Hospital decision-makers must undertake multiple high stakes investment and disinvestment decisions annually for innovative HTs, usually without adequate information. Despite the existence of arms-length HTA Agencies, inadequate information is available to hospital decision-makers either because relevant HTA reports are not yet released at the time of entry of new technologies to the field, or because even when the report exists, the information contained is insufficient to clarify the contextualized informational needs of hospital decision makers. Therefore, there has recently been a rising trend toward hospital-based HTA units and programs. These units/programs complement the work of National/Regional HTA Agencies by providing the key and relevant evidence needed by hospital decision makers in their specific hospital context, and within required decision-making timelines. The emergence of HB-HTA is creating a comprehensive HTA ecosystem across health care levels, which creates better bridges for knowledge translation through relevance and timeliness.

Information Theory, Inference and Learning Algorithms Sep 09 2021

Information theory and inference, taught together in this exciting textbook, lie at the heart of many important areas of modern technology - communication, signal processing, data mining, machine learning, pattern recognition, computational neuroscience, bioinformatics and cryptography. The book introduces theory in tandem with applications. Information theory is taught alongside practical communication systems such as arithmetic coding for data compression and sparse-graph codes for error-correction. Inference techniques, including message-passing algorithms, Monte Carlo methods and variational approximations, are developed alongside applications to clustering, convolutional codes, independent component analysis, and neural networks. Uniquely, the book covers state-of-the-art error-correcting codes, including low-density-parity-check codes, turbo codes, and digital fountain codes - the twenty-first-century standards for satellite communications, disk drives, and data broadcast. Richly illustrated, filled with worked

examples and over 400 exercises, some with detailed solutions, the book is ideal for self-learning, and for undergraduate or graduate courses. It also provides an unparalleled entry point for professionals in areas as diverse as computational biology, financial engineering and machine learning.
