evaluation copy of Windows Server 2012 and play with it. Get the ISO image file and burn a DVD disc out of it, then perform installation accordingly. The exam covers multiple different Window versions. We use Windows 2012 for demonstration, but the concepts apply to WinServ 2008/2008R2, Win7 and Win8 as well. Windows 8 and Server 2012 share the same code base, therefore those tools for Windows 8 deployment often works well for Server 2012. Similarly, Windows 7 and Server 2008 share the same code base. 2008R2 is different - it is closer to the 2012 side. Keep in mind, Win7/Win8 security settings should be configured through Group Policy on the domain controller whenever possible. The biggest difference between Windows Server 2012 and the 2008 counterpart is the UI. Most underlying infrastructure, methods and principles are highly similar. Server 2012 uses the Windows 8 UI. The traditional Server Manager, File Explorer, and Control Panel tools are still there, all with new faces.
