Today's students rely heavily on using electronic resources; they expect to be able to access library resources from any location and at any time of the day. More and more schools, from K-12 through graduate level universities, are offering online education, and libraries must be prepared to guide learners in how to use library resources when and where they are needed. Online tutorials are the library's answer to providing this immediate instruction, and today's learners are expecting to have these guides available. Many librarians don't have the technical expertise needed to create online tutorials. Creating Online Tutorials: A Practical Guide for Librarians will help guide them through the basics of designing and producing an online tutorial.

Through practical examples, the book will guide librarians just starting the process of creating an online tutorial from start to finish and will provide tips that will be useful to librarians with more experience in designing online tutorials. This detailed roadmap for designing and producing online tutorials covers: When to consider a tutorial Needs assessment Choosing the right technology Selecting and organizing instructional content Planning—script, images, narration, other design elements Assessment as a primary design element Maintenance and updating Online tutorial resources After reading this book, new tutorial developers will have a practical, customizable blueprint that will enable them confidently address the creation of their first online tutorials, and experienced developers will learn efficient techniques to create and enhance future tutorials that are attractive, effective teaching tools. This manual is designed to be both a reference guide and a hands-on, step-by-step tutorial. As a reference guide it provides quick answers to common questions, and as a hand-on, step-by-step tutorial it helps readers learn how to use specific functions to manage law office functions and prepare forms, reports and bills. ABACUSLAW allows readers to: Clock time as they work Generate time tickets on the spot Print reports that track staff billing time Prepare standard or customized client invoices Print checks and reports Avoid misses deadlines with legal calendaring Create pre-filled court forms Generate over 100 standard reports Fuel management planning can be a complex problem that is assisted by fire behavior modeling and geospatial analyses. Fuel management

often is a particularly complicated process in which the benefits and potential impacts of fuel treatments need to be demonstrated in the context of land management goals and public expectations. Fire intensity, likelihood, and effects can be analyzed for multiple treatment alternatives. Depending on the goal, the effect of treatments on wildfire impacts can be considered at multiple scales, from a single forest stand or planning unit to a watershed to a national forest to the Nation as a whole. The fuel treatment planning process is complicated by the lack of data assimilation among fire behavior models and by weak linkages to geographic information systems, corporate data, and desktop office software. ArcFuels is a streamlined fuel management planning and wildfire risk assessment system. ArcFuels creates a trans-scale (stand to large landscape) interface to apply various forest growth and fire behavior models within an ArcGIS® platform to design

and test fuel treatment alternatives. It eliminates a number of tedious data transformations and repetitive processes that have plagued the fire operations and research communities as they apply the models to solve fuel management problems. This User Guide and Tutorial includes an overview of ArcFuels and its functionality, a tutorial highlighting all the tools within ArcFuels, and fuel treatment planning scenarios. There is also a section for obtaining, formatting, and setting up ArcFuels for use with your own data. It is assumed that the reader has basic familiarity with the Forest Vegetation Simulator (forest growth and yield program) and FlamMap (landscape fire behavior model). The Commands Guide Tutorial for SolidWorks 2010 is a comprehensive reference book written to assist beginner to intermediate users of SolidWorks. SolidWorks is an immense software package, and no one book can cover all topics for all users. The book provides a centralized reference location to address many of the System and Document properties, FeatureManagers, PropertyManagers, ConfigurationManagers and RenderManagers along with 2D and 3D Sketch tools, Sketch entities, 3D Feature tools, Motion Study, SustainabilityXpress, DFMXpress, SimulationXpress, Sheet Metal, PhotoView 360 and more. Chapter 1 provides a

basic overview of the concepts and terminology used throughout this book using SolidWorks 2010 software. If you are completely new to SolidWorks, you should read Chapter 1 in detail and complete Lesson 1, Lesson 2 and Lesson 3 in the SolidWorks Tutorials. If you are familiar with an earlier release of SolidWorks, you still might want to skim Chapter 1 to become acquainted with some of the commands, menus and features that you have not used; or you can simply jump to any section in any chapter. Each chapter (17 total) provides detailed PropertyManager information on key topics with individual stand alone short tutorials to reinforce and demonstrate the functionality and ease of the SolidWorks tool or feature. All models for the 230 plus tutorials are located on the enclosed CD with their solution (initial and final). Learn by doing, not just by reading! Formulate the skills to create, modify and edit sketches and solid features. Learn the

techniques to reuse features, parts and assemblies through symmetry, patterns, copied components, design tables, configurations and more. The book is designed to compliment the Online Tutorials and Online Help contained in SolidWorks 2010. The goal is to illustrate how multiple design situations and systematic steps combine to produce successful designs. The authors developed the tutorials by combining their own industry experience with the knowledge of engineers, department managers, vendors and manufacturers. These professionals are directly involved with SolidWorks everyday. Their responsibilities go far beyond the creation of just a 3D model.
