Intermittent fasting is arguably the least expensive and most powerful healing method we can incorporate into our lives. Every religion has an element of fasting—whether it's 30 days of Ramadan or a one day Yom Kippur fast. Our ancient ancestors were definitely on to something. We humans have been fasting since we first walked the earth. Our paleolithic ancestors didn't have the luxury of 24/7 convenience stores, a Starbucks on every corner, or even refrigerators to store their food. Thus, they ate what was freshly available. But sometimes they couldn't find anything to eat, and their bodies evolved to be able to function without food for extended periods of time. Today, we still have this same biology – we haven't evolved at all. And, if anything, fasting from time to time is more “natural” and healthier than constantly eating 3-4 (or more) meals per day. I'll show you proof further below.

Institutions of higher learning are providing access to free and low-cost open resources to support students with prior college-level learning during every step of their educational journey. This unconventional approach to education removes traditional barriers to college credit by placing learners in an open environment, which encourages accessibility to higher education and fosters independent and critical thinking. By providing learners with free resources, more learners have the resources needed to be successful in college. Prior learning assessment is an excellent way for students to demonstrate the skills and knowledge gained throughout the course of their lives. By developing a portfolio of artifacts that support prior learning outside of the classroom, learners reduce the time and money needed to complete a degree. Open educational resources, prior learning assessment, and competency-based learning offer the potential to provide access to higher education to those who may not have the opportunity to earn a college degree. As the costs of higher education continue to rise, these flexible, open approaches to learning can bridge the equity gap and provide more opportunity to earn a college degree. Enhancing Higher Education Accessibility Through Open Education and Prior Learning provides a comprehensive resource book on open resources and prior learning in order to provide access and equity to higher education. The chapters pull together resources and case studies that exemplify alternative means to higher education. Highlighted topics within this book include remote e-learning, online fundraising, smart learning and assessments, effective learning, and faculty mentorship. This book is essential for curriculum designers; administrators; policymakers; government executives; professors and instructors in higher education; students; researchers in adult education, competency-based education, social justice, and open educational resources; and practitioners interested in open educational resources and accessibility in higher education. The crisis and its aftermath had a dramatic short-term effect on federal relations and, as the twelve case studies in this volume show, set in place a new set of socio-political factors that are shaping the longer-run process of institutional evolution and adaptation in federal systems. This illuminating book illustrates how an understanding of these complex dynamics is crucial to the development of policies needed for effective and sustainable federal governance in the twenty-first century. The aim of this book is to impart a sound understanding, both physical and mathematical, of the fundamental theory of vibration and its applications. The book presents in a simple and systematic manner techniques that can easily be applied to the analysis of vibration of mechanical and structural systems. Unlike other texts on vibrations, the approach is general, based on the conservation of energy and Lagrangian dynamics, and develops specific techniques from these foundations in clearly understandable stages. Suitable for a one-semester course on vibrations, the book presents new concepts in simple terms and explains procedures for solving problems in considerable detail. From fringe conspiracy theories to 'alternative facts', a timely look at how we arrived in the 'fake news' era. Would your younger self believe the news of today? An entire city block blown up by a suicide bomber on Christmas Day because he believed phone towers spread disease. A Representative elected to the US Congress on a platform that Democrats are secretly harvesting an anti-aging chemical from the blood of abused children. Angry rioters in furs and horns overrun the Capitol in a bloody carnage of insurrection. The Prime Minister of Australia employing the wife of his friend who fronts a group the FBI has declared terrorists. A global pandemic which, even as they lie dying from it, people refuse to believe exists. Many who sat in shocked disbelief as these events beamed around the world asked the same question: 'How did we get here?' For those rioters, it was the culmination of a journey of online radicalisation that began with the weaponisation of disinformation by their political leaders and outrageously biased 'news' commentators. *Facts and Other Lies* puts fake news in its historical context and explains how disinformation has fractured society, even threatening democracy itself. It explains why disinformation is so potent and so hard to stop, and what we can do to help prevent its proliferation in Australia - where politicians and shock jocks are already operating from the same dark playbook. It outlines how anyone can defuse disinformation in the home, office or pub, or wherever the deluded gather to spread their nonsense. Be prepared! 'This is a timely account of a growing malignancy affecting all modern democracies' Kevin Rudd, former Prime Minister of Australia 'Ed Coper keenly explains how lying has been normalised in right wing media - both social and mainstream. The Trump-inspired attack on the US Capitol on 6 January is just one consequence. Coper deftly shows us what is to be done and offers some real solutions to restore trust in public discourse.' Malcolm Turnbull, former Prime Minister of Australia 'Fascinating and terrifying . . . illuminates so much about humans and social media' Bri Lee, author of *Who Gets to Be Smart* 'Read this book if you want to save democracy' Wayne Swan, former Deputy Prime Minister of Australia 'Few have mapped our information dystopia more effectively - and entertainingly - than Coper' Bernard Keane, Politics Editor, *Crikey* 'Essential reading for anyone wanting to cut through the nonsense and get to the truth' Eason Jordan, former Chief News Executive, CNN 'We live in a world that unfolds at a pace, and with the violent twists and turns in the plot, of a thriller. This book captures the intensity of our politics and connects it to the science of misinformation . . . a great read' Professor Stephan Lewandowsky, Chair in Cognitive Psychology, University of Bristol Get up-to-speed on the functionality of your TI-84 Plus calculator Completely revised to cover the latest updates to the TI-84 Plus calculators, this bestselling guide will help you become the most savvy TI-84 Plus user in the classroom! The use of spatial vector notation greatly reduces the volume of algebra which allows systems to be described using fewer equations and fewer quantities. It also allows problems to be solved in fewer steps, and solutions to be expressed more succinctly. In addition algorithms are explained simply and clearly, and are expressed in a compact form.
