This book comprises the historical overview of migration processes in Kyrgyzstan, contemporary migration trends in international migration and various social, economic and political impacts of migration. It presents the findings of longstanding, in-depth, comprehensive and empirical research. Insights are maximized by applying the multi-sited strategy of analyzing both the migrant's place of origin and that of destination. The primary goal of the book is to contribute to a better understanding of the meanings and the impacts of contemporary international migration processes in Kyrgyzstan and their relevance for local livelihoods. This collection of essays explores the evolution of anti-discrimination law in European civil law jurisdictions. Historically, scholarship in this area has focused on the common law, which has also taken the lead in developing the theory and practice of anti-discrimination law. This volume breaks new ground by offering a sustained, critical, legal and socio-legal, comparative look at how anti-discrimination is faring in European civil law environments. While it is true that anti-discrimination law is seen as a foreign transplant in some regions, it does not fare poorly across the board. As shown by the case studies herein, the success of anti-discrimination law is found to vary according to its national context, the actors involved, and the evolution of the particular concept or ground of discrimination in question. In times of extreme violence, what explains peace in some places? This book investigates geographic variation in Hindu-Muslim violence in Gujarat in 2002, an event witnessed closely by the author. It compares peaceful and violent towns, villages, and neighbourhoods to study how political violence spreads. A combination of statistical and ethnographic methods unpack the mechanisms of crowd behaviour, intergroup relations, and political incentives. Macro-level risk factors that led to the violence are analysed to provide a close understanding of the behaviour of people who participated in the violence, were targeted by it and, often, compelled to carry on living alongside their perpetrators. Findings systematically demonstrate the implicit political logic of the violence. Most of all, by moving up close to the people caught in the middle of violence; findings highlight the interplay between politics, the spatial environment, and the cognitive decision-making processes of individuals. Firm-to-firm relationships, along with the overall structure of industry, have changed markedly over the past decades. Replacing the model of vertical integration with one of global business, firms have started to outsource more by using a wider global network. At the same time, they have begun to increase their control and coordination along the value chain to remain competitive, blurring the boundaries between companies. Understanding the nature of the firm and its role in coordinating the supply chain will help firms to better define global competitive strategies.. The challenges that lie ahead for global business render obsolete the traditional model of procuring each service without long-term supply chain management. Current trends suggest that in the future there will be even deeper supply chain integration in most industries. The Nature of the Firm in the Oil Industry aims to facilitate the understanding of 'the firm' via the analysis of the specific relationship between international oil companies, which are among the world's biggest firms and which act as 'core system integrators', and the oil services companies, which help to find, extract, produce and distribute oil along the petroleum industry supply chain. This relationship serves as an example of deep integration by core system integrators and provides insights into the change in the nature of the firm in the era of modern globalization. Aimed at researchers and academics, The Nature of the Firm in the Oil Industry offers a thorough examination of this relationship in an effort to shed light on the nature of the firm, both in the oil industry and in global business today. It is a humble attempt to better understand the firm in a crucial industry. In many countries today there is a growing and genuinely-held concern that the institutional arrangements for the protection of human rights suffer from a 'democratic deficit'. Yet at the same time there appears to be a new consensus that human rights require legal protection and that all branches of the state have a shared responsibility for upholding and realising those legally protected rights. This volume of essays tries to understand this paradox by considering how parliaments have sought to discharge their responsibility to protect human rights. Contributors seek to take stock of the extent to which national and sub-national parliaments have developed legislative review for human rights compatibility, and the effect of international initiatives to increase the role of parliaments in relation to human rights. They also consider the relationship between legislative review and judicial review for human rights compatibility, and whether courts could do more to incentivise better democratic deliberation about human rights. Enhancing the role of parliaments in the protection and realisation of human rights emerges as an idea whose time has come, but the volume makes clear that there is a great deal more to do in all parliaments to develop the institutional structures, processes and mechanisms necessary to put human rights at the centre of their function of making law and holding the government to account. The sense of democratic deficit is unlikely to dissipate unless parliaments empower themselves by exercising the considerable powers and responsibilities they already have to interpret and apply human rights law, and courts in turn pay closer attention to that reasoned consideration. 'I believe that this book will be of enormous value to all of those interested in human rights, in modern legislatures, and the relationship between the two. As this is absolutely fundamental to the character and credibility of democracy, academic insight of this sort is especially welcome. This is an area where I expect there to be an ever expanding community of interest.' From the Foreword by the Rt Hon John Bercow MP, Speaker of the House of Commons Canada's public higher education system is in trouble. The economic and social benefits of the Canadian university system are widely seen as a public good, which raises a pressing question: Why should we aspire to anything less than a great system? For that to happen, everything about the way universities currently operate, from the boardroom to the classroom, must change – but this kind of operational and public policy transformation will not be easy. Nothing Less than Great provides an expert analysis of the current state and challenges of Canada's university system, looking for positive change by reclaiming what a university is meant to offer for society and for citizens. Harvey P. Weingarten begins with the fundamental question that all students must ask about higher education: Is it worth going to university? From there, he stresses the need for transparency about what universities do and what they accomplish, addresses the importance of modernizing curriculum to emphasize skills over content, and provides recommendations for reform. Exploring how universities might – and should – change to reclaim their central purpose for Canadians, Nothing Less than Great will be of interest to anyone who cares about the future of our country and the important role universities play in determining that future. Papers from a conference held Septemeber 29-October 1, 2011 in Joensuu, Finland. This book explores the relationship between oil pollution laws and environmental justice by comparing and contrasting the United States and Nigeria. Critically, this book not only examines the fluidity of oil pollutions laws but also how effective or ineffective enforcement can be when viewed through the lens of environmental justice. Using Nigeria as a case study and drawing upon examples from the United States, it examines the legal and institutional challenges impacting upon the effective enforcement of laws and provides a contrasting view of developed and developing countries. Focusing on the oil and gas industry, the book discusses the laws and international acceptable standards (IAS) in these industries, the principles behind their application, the existing barriers to their effective implementation, and how to overcome those barriers. Utilising an environmental justice framework, the book demonstrates the synergy between policy-making, human rights, and justice in oil-producing regions as well as addressing the importance of protecting the rights of minorities. Through a comparative analysis of the United States and Nigeria, this book draws out enforcement approaches and mechanisms for tackling oil-related pollution with a view to reducing environmental injustice in developing countries. Examining the role of NGOs in pursuing environmental justice matters, the book showed the regional courts as one avenue of overcoming the enforcement challenges faced by the developing countries. This book will be of great interest to students and scholars of environmental law, environmental justice, minorities' rights, business and human rights, energy law, and natural resource governance. This book is a compilation of papers presented at the Regional Tribology Conference 2011 (RTC2011) - Langkawi, Malaysia on 22 ~ 24 November 2011. Ozawa Ichir? was the axis on which Japanese politics turned for more than two decades. He helped to reshape the electoral system, political funding rules, the evolution of the party system, the nature of executive government, the roles and powers of bureaucrats, and the conduct of parliamentary and policymaking processes. Admired and reviled in almost equal measure, Ozawa has been the most debated and yet least understood politician in Japan, with little agreement to be found amongst the many who have debated his patent political assets and palpable political flaws. This book examines the political goals, behaviour, methods and practices of Ozawa Ichir?, and in doing so, provides fascinating insights into the inner workings of Japanese politics. It explores Ozawa's paradoxical and conflicting contributions in terms of two contrasting models of 'old' and 'new' politics. Indeed, therein lies the problem of understanding the 'real' Ozawa: he remained a practitioner of old politics despite his rhetorical agenda of change to bring about new politics. In seeking to unravel the Ozawa enigma, Aurelia George Mulgan reveals his primary motivations, to establish whether he sought power primarily to enact reforms, or, whether his reform goals simply disguised power-seeking objectives. This volume seeks to illuminate Ozawa's true character as a politician, and untangle the complex elements of old and new politics that he represents. Through an in-depth study of Ozawa and his political activities, this book shows how the Japanese political system works at the micro level of individual politicians, political relationships and systems. As such it will be of huge interest to students and scholars of Japanese politics, Asian politics and political systems. On March 11, 2011, Japan was struck by the shockwaves of a 9.0 magnitude undersea earthquake originating less than 50 miles off its eastern coastline. The most powerful earthquake to have hit Japan in recorded history, it produced a devastating tsunami with waves reaching heights of over 130 feet that in turn caused an unprecedented multireactor meltdown at Fukushima Daiichi Nuclear Power Plant. This triple catastrophe claimed almost 20,000 lives, destroyed whole towns, and will ultimately cost hundreds of billions of dollars for reconstruction. In 3.11, Richard Samuels offers the first broad scholarly assessment of the disaster's impact on Japan's government and society. The events of March 2011 occurred after two decades of social and economic malaise—as well as considerable political and administrative dysfunction at both the national and local levels—and resulted in national soul-searching. Political reformers saw in the tragedy cause for hope: an opportunity for Japan to remake itself. Samuels explores Japan's post-earthquake actions in three key sectors: national security, energy policy, and local governance. For some reformers, 3.11 was a warning for Japan to overhaul its priorities and political processes. For others, it was a once-in-a-millennium event; they cautioned that while national policy could be improved, dramatic changes would be counterproductive. Still others declared that the catastrophe demonstrated the need to return to an idealized past and rebuild what has been lost to modernity and globalization. Samuels chronicles the battles among these perspectives and analyzes various attempts to mobilize popular support by political entrepreneurs who repeatedly invoked three powerfully affective themes: leadership, community, and vulnerability. Assessing reformers' successes and failures as they used the catastrophe to push their particular agendas—and by examining the earthquake and its aftermath alongside prior disasters in Japan, China, and the United States—Samuels outlines Japan's rhetoric of crisis and shows how it has come to define post-3.11 politics and public policy. In considering diffusion from a global perspective, this book provides timely new insights into its application in a variety of fields and at many levels of both legal and non-legal orderings. This collection contributes to the wider theoretical debate concerning the movement of law and legal norms by engaging with concrete examples of legal diffusion, in jurisdictions as diverse as Albania, the Czech Republic, Poland and Kuwait. These examples, taken together, provide a comprehensive illustration of the theoretical debates concerning the diffusion of laws and norms in terms of both process and form. This international, multi-disciplinary and multi-methodological volume brings together scholars from law and social science with experience in mixed and hybrid jurisdictions, and advances the conversation about legal and normative diffusion across the academy. It represents a robust challenge to many preconceived ideas about legal movement and, as such, will be of interest to academics and students working in the fields of Law, Sociology, Anthropology, Political Science, Legal Education and comparative method. The aim of this book is to describe the fundamental aspects and details of certain gas chromatography applications in Plant Science, Wine technology, Toxicology and the other specific disciplines that are currently being researched. The very best gas chromatography experts have been chosen as authors in each area. The individual chapter has been written to be self-contained so that readers may peruse particular topics but can pursue the other chapters in the each section to gain more insight about different gas chromatography applications in the same research field. This book will surely be useful to gas chromatography users who are desirous of perfecting themselves in one of the important branch of analytical chemistry. As the single most populous nation in Africa, Nigeria recently overtook South Africa as the largest economy on the continent. Natural resources, oil and gas in particular, comprise the country's single largest revenue-earner but the 170m person economy also has seen significant activity in recent years into the industrial, financial, telecoms and – as of 2013 – power sectors. Hydrocarbons reserves have traditionally attracted the vast majority of domestic and foreign investment in Nigeria. Oil production capacity has remained at roughly 2.5m barrels per day (bpd) since the start of 2000, although output fell to 2.2m bpd on average in 2012. Still, the country has long operated below its true potential and government efforts in recent years have sought to increase local value addition, by boosting refining capacity and minimising theft and bunkering. The country's banking sector has been through a significant shake-up as well, resulting in a far healthier and more robust financial industry, while reforms in the telecoms and agricultural sectors have strengthened medium-term prospects. This comprehensive and concise book critically examines the essential principles, practices and approaches to financial accounting, cost and management accounting, and financial management. This book is intended for the postgraduate students of management and commerce. Besides, it is equally useful for the students of engineering and technology. The objective of this book is to assist the students and readers in developing an understanding of the theories of various branches of accounting and financial management, and to integrate the knowledge with practice in evaluating the strategic management decisions. The book contains thirty-three chapters divided into three parts. Part A comprising ten chapters discusses the key principles and practices of financial accounting. Part B containing eight chapters explains various methods and techniques of cost and management accounting. Part C comprising fifteen chapters provides an insight into the numerous dimensions of financial management policies and practices. Key Features • A systematic presentation of the subject matter, supported with substantial number of Examples, Diagrams and Tables for easy understanding. • The topics of 'Accounting for Fixed Assets' (Chapter 4), 'Depreciation Accounting' (Chapter 5), 'Revenue Recognition' (Chapter 6), 'Accounting for Inventories' (Chapter 8) and 'Cash Flow Statement' (Chapter 20) have been written thoroughly in accordance with the Accounting Standards (AS) issued by the ICAI. • Review questions covering examination problems and their answers are given at the end of each chapter. The detailed answers are available in the Instructors' Manual. • An exhaustive glossary of terms have been provided to explain the core concepts. • Solutions Manual is also available. This book provides the first comprehensive analysis of factors that transform a prima facie non-international armed conflict (NIAC) into an international armed conflict (IAC) and the consequences that follow from this process of internationalization. It examines in detail the historical development as well as the current state of the relevant rules of international humanitarian law. The discussion is grounded in general international law, complemented with abundant references to case law, and illustrated by examples from twentieth and twenty-first century armed conflicts. In Part I, the book puts forward a thorough catalogue of modalities of conflict internationalization that includes outside intervention, State dissolution, and recognition of belligerency. It then specifically considers the legal qualification of complex situations that feature more than two conflict parties and contrasts the mechanism of internationalization of armed conflicts with the reverse process of de-internationalization. Part II of the book challenges the conventional wisdom that members of non-State armed groups do not normally benefit from combatant status. It argues that the majority of fighters belonging to non-State armed groups in most types of internationalized armed conflicts are in fact eligible for combatant status. Finally, Part III turns to belligerent occupation, traditionally understood as a leading example of a notion that cannot be transposed to armed conflicts occurring in the territory of a single State. By contrast, the book argues in favour of the applicability of the law of belligerent occupation to internationalized armed conflicts. The Nigerian telecommunications industry has continued to grow in a phenomenal manner following market liberalization reforms that commenced in the 1990s. As of 2017, the telecommunications industry was one of the fastest-growing economic sectors in Nigeria and the fourth largest contributor to the country's Gross Domestic Product. The telecommunications industry, however, remains a highly technical and naturally dynamic industry that has not been a usual area for legal research in developing countries such as Nigeria. This book bridges that gap in knowledge by providing an analysis of the legal and policy instruments that regulate the industry. It comprises eleven chapters that discuss the historical evolution of telecommunications and its regulation; the development of the Nigerian telecommunications industry from 1886 to 2017; the legal basis for the regulation of the industry; the licensing and duties of service providers; the regulation of network infrastructure; the protection of consumers; the regulation of competition, interconnection, universal access, and environmental protection; and the resolution of industry disputes. This book will be useful to policy makers, legislators, regulators, lawyers, law students, investors, operators, and consumers, as well as any person interested in the Nigerian telecommunications industry. The book provides a systematic overview of Intelligent Transportation Systems (ITS). First, it includes an insight into the reference architectures developed within the main EU research projects. Then, it delves into each of the layers of such architectures, from physical to application layer,

describing the technological issues which are being currently faced by some of the most important ITS research groups. The book concludes with some end user services and applications deployed by industrial partners. This book is a well-balanced combination of academic contributions and industrial applications in the field of Intelligent Transportation Systems. The most representative technologies and research results achieved by some of the most relevant research groups working on ITS, collated to show the chances of generating industrial solutions to be deployed in real transportation environments. Almost all junior barristers in civil practice are likely to encounter family law work in their first years of practice. This manual therefore provides a detailed introduction to the key areas of the substantive family law of which the junior practitioner should have a good working knowledge. Key aspects of family law covered include domestic violence, care proceedings and pre-nuptial agreements. Adopting a highly pragmatic approach, Family Law in Practice encourages students to build on their existing basic practitioner skills, and highlights how to approach writing opinions and drafting documents specific to family law. It provides invaluable practical advice on how to prepare for different types of hearing, what factors to consider in relation to negotiation, how to make persuasive submissions, and how to handle witnesses effectively, ensuring that the junior practitioner is fully prepared for his or her first steps in the family courts. Key updates to this new edition include coverage of *Yemshaw v London Borough of Hounslow* [2011] UKSC 3, the Family Proceedings Rules 2010 and the Supreme Court decision in *Radmacher v Granatino*. The authors have also included a short general introduction to the child support system. Advances in Microfluidics provides a current snapshot of the field of microfluidics as it relates to a variety of sub-disciplines. The chapters have been divided into three sections: Fluid Dynamics, Technology, and Applications, although a number of the chapters contain aspects that make them applicable to more than one section. It is hoped that this book will serve as a useful resource for recent entrants to the field as well as for established practitioners. Starting from the fundamentals of brakes and braking, Braking of Road Vehicles covers car and commercial vehicle applications and developments from both a theoretical and practical standpoint. Drawing on insights from leading experts from across the automotive industry, experienced industry course leader Andrew Day has developed a new handbook for automotive engineers needing an introduction to or refresh on this complex and critical topic. With coverage broad enough to appeal to general vehicle engineers and detailed enough to inform those with specialist brake interests, Braking of Road Vehicles is a reliable, no-nonsense guide for automotive professionals working within OEMs, suppliers and legislative organizations. Designed to meet the needs of working automotive engineers who require a comprehensive introduction to road vehicle brakes and braking systems. Offers practical, no-nonsense coverage, beginning with the fundamentals and moving on to cover specific technologies, applications and legislative details. Provides all the necessary information for specialists and non-specialists to keep up to date with relevant changes and advances in the area. The European Court of Human Rights is one of the main players in interpreting international human rights law where issues of general international law arise. While developing its own jurisprudence for the protection of human rights in the European context, it remains embedded in the developments of general international law. However, because the Court does not always follow general international law closely and develops its own doctrines, which are, in turn, influential for national courts as well as other international courts and tribunals, a feedback loop of influence occurs. This book explores the interaction, including the problems arising in the context of human rights, between the European Convention on Human Rights and general international law. It contributes to ongoing debates on the fragmentation and convergence of international law from the perspective of international judges as well as academics. Some of the chapters suggest reconciling methods and convergence while others stress the danger of fragmentation. The focus is on specific topics which have posed special problems, namely sources, interpretation, jurisdiction, state responsibility and immunity. Recent decades have seen remarkable advances in the treatment of upper gastrointestinal malignancies, i.e., adenocarcinoma and squamous cell carcinoma as well as gastrointestinal stromal and other rare tumors of the esophagus and stomach. While, historically, surgical resection has been the sole treatment for these tumors, multimodal therapies have meanwhile proven their efficacy. At present, pre- and postoperative chemotherapy and radiotherapy, targeted drug therapy, and stage-specific surgical approaches are all indispensable cornerstones of an individualized treatment for upper gastrointestinal malignancies. With such multimodal treatment, better outcomes comprising improved quality of life and prolonged survival have been achieved for patients. However, for many tumor entities and stages, the ideal combination and sequence of treatments is still being evaluated in clinical trials. Moreover, the value of novel approaches such as immunotherapy or robotic surgery remains a matter of research. In this Special Issue of Cancers, up-to-date original research, short communications, and comprehensive review articles on all modalities playing a role in the treatment of upper gastrointestinal malignancies have been published. Although domestic law plays an important role in investment treaty arbitration, this issue is little discussed or analysed. When should investment treaty tribunals engage with domestic law? How should investment treaty tribunals resolve matters of domestic law? These questions have significant ramifications for both the legitimacy of the investment treaty system and the arbitral mandate of the tribunal members. Drawing on case law, international law principles, and comparative analysis, this book addresses these important issues. Part I of the book examines three areas of investment law-the 'fair and equitable treatment' standard, expropriation, and remedies-in which the role of domestic law has so far been under-appreciated. It argues that tribunals are justified in drawing on domestic law as a relevant factor in their rulings on these three issues. Part II of the book examines how questions of domestic law should be resolved in investment arbitration. It proposes a normative framework for use by tribunals in ascertaining the contents of the domestic law to be applied. It then considers counter-arguments, exemptions, and exceptions to applying this framework, and it evaluates how tribunals have ruled on questions of domestic law to date. Investment treaty arbitration has endured much criticism in recent times, partly over fears of its encroachment on sovereignty. The book ultimately contends that closer attention by tribunals to one of the principal expressions of a state's sovereignty-the elaboration of its domestic law-will reduce criticism of the field. The book contains a selection of articles on special research topics on Mathematical Biology and the interdisciplinary fields of mathematical modelling of biosystems. The treatment is both pedagogical and advanced to enhance future scientific research. We include comprehensive reviews written by prominent leaders of scientific research groups, new results on Population Dynamics such as Hybrid Discrete-Continuous Models of Cell Populations and the Hopf bifurcation on Predator-Prey Models, and some state of the art research on Medical Physics such as Optimization Methods applied to Raman Spectroscopy. Other topics covered focus on evolution biology, infectious diseases, DNA structure and many more. Following on from the earlier edited collection, Loss of Control and Diminished Responsibility, this book is the first volume in the Substantive Issues in Criminal Law series. It serves as a leading point of reference in the area relating to participation in crime and identifies the need for a consistent approach to the doctrinal and theoretical underpinnings of complicity liability. This book is a valuable reference resource for those in the criminal justice community in the UK and abroad and for academics, the judiciary and policy-makers. The Landmark Cases series highlights the historical antecedents of what are widely considered to be the leading cases in a discipline, and seeks to provide contexts in which to better understand how and why certain cases came to be regarded as the 'landmark' cases in any given field. Succession law's long pedigree, near-universal application, immense capacity for human interest stories, somewhat uncertain future in England and Wales, and close connection to demographics make it an ideal candidate for a Landmark Cases volume. The distinguished contributors to this collection consider cases ranging from 1720 to 2017, covering issues such as will-making and interpretation, the position of beneficiaries and personal representatives, testamentary promises, and the extent of testamentary freedom in England and Wales and beyond. The cases are relevant not only to scholars and students of succession law per se, but also those working in fields such as tax, trusts, tort and land law. They raise issues as diverse as class, colonialism, familial dynamics, expectations and obligations, mental health, and the proper roles of the legal profession and the welfare state. The collection will provoke much discussion on what makes a 'landmark' case, as well as on the peculiarities and limitations of the case law method. Examines effects of the environmental distribution of antimicrobial resistance genes on human health and the ecosystem Resistance genes are everywhere in nature—in pathogens, commensals, and environmental microorganisms. This contributed work shows how the environment plays a pivotal role in the development of antimicrobial resistance traits in bacteria and the distribution of resistant microbial species, resistant genetic material, and antibiotic compounds. Readers will discover the impact of the distribution in the environment of antimicrobial resistance genes and antibiotics on both the ecosystem and human and animal health. Antimicrobial Resistance in the Environment is divided into four parts: Part I, Sources, including ecological and clinical consequences of antibiotic resistance by environmental microbes Part II, Fate, including strategies to assess and minimize the biological risk of antibiotic resistance in the environment Part III, Antimicrobial Substances and Resistance, including antibiotics in the aquatic environment Part IV, Effects and Risks, including the effect of antimicrobials used for non-human purposes on human health Recognizing the intricate links among overlapping complex systems, this book examines antimicrobial resistance using a comprehensive ecosystem approach. Moreover, the book's multidisciplinary framework applies principles of microbiology, environmental toxicology, and chemistry to assess the human and ecological risks associated with exposure to antibiotics or antibiotic resistance genes that are environmental contaminants. Each chapter has been written by one or more leading researchers in such fields as microbiology, environmental science, ecology, and toxicology. Comprehensive reference lists at the end of all chapters serve as a gateway to the primary research in the field. Presenting and analyzing the latest findings in a field of growing importance to human and environmental health, this text offers readers new insights into the role of the environment in antimicrobial resistance development, the dissemination of antimicrobial resistant genetic elements, and the transport of antibiotic resistance genes and antibiotics. Examination of the effects of social media innovations on electronically mediated discourse, focusing on interaction. Law enforcement at sea has become an increasingly important tool for combating transnational crime. Such law enforcement operations are commonly directed by multinational missions composed of military rather than police forces, and are often carried out in maritime areas not subject to national jurisdiction. Because of these characteristics, maritime law enforcement operations touch upon many unresolved human rights issues. In the present study, counter-piracy operations off the coast of Somalia and in the Indian Ocean serve as the quintessential example of how law enforcement measures taken at sea may fall short of international human rights standards. This work is a valuable contribution to legal scholarship dealing with the human rights dimension of maritime law enforcement operations. It is a useful, timely and innovative resource for both academics and legal practitioners alike, or any person interested in the applicability and scope of human rights norms in the maritime context. House of Lords reform is often characterised as unfinished business: a riddle that has been left unanswered since 1911. But rarely can an unanswered riddle have had so many answers offered, even though few have been accepted; indeed, when Viscount Cave was invited in the mid-1920s to lead a Cabinet committee on Lords reform, he complained of finding 'the ground covered by an embarrassing mass of proposals'. That embarrassing mass increased throughout the twentieth century. Much ink has been spilled on what should be done with the upper House of Parliament; much less ink has been expended on why reform has been so difficult to achieve. This book analyses in detail the principal attempts to reform the House of Lords. Starting with the Parliament Act of 1911 the book examines the century of non-reform that followed, drawing upon substantial archival sources, many of which have been under-utilised until now. These sources challenge many of the existing understandings of the history of House of Lords reform and the reasons for success or failure of reform attempts. The book begins by arguing against the popular idea that the 1911 Act was intended by its supporters to be a temporary measure. 'No one – peers included – should be allowed to pronounce about the future of the House of Lords without reading Chris Ballinger's authoritative, shrewd and readable account about reform attempts over the past century. He punctures several widely-held myths and claims in the current debate.' Rt Hon Peter Riddell CBE Director, Institute for Government and former Hansard Society chair 'This is at once an impeccably researched academic study, and a thoroughly readable account loaded with lessons for today's would-be Lords reformers.' Lord (David) Lipsey This unique Research Companion takes a critical approach to a wide variety of theoretical, practical, legal and policy issues surrounding and underpinning the operation of international criminal law as applied by international criminal tribunals. The authors raise issues which are likely to provide the most significant challenges and most promising opportunities for the continuing development of this body of law. This book provides a comprehensive assessment of the effectiveness of Mobility Partnerships and their consequences for third countries. Mobility partnerships between the EU and third countries are usually viewed as reflecting asymmetric power relations where development aid, trade relations and visa policies are made conditional upon the cooperation by third countries with an EU agenda of migration control. This book argues that three main factors condition the relevance of Mobility Partnerships: the state of relations between EU Member States and a third country, and in particular, the role of postcolonial ties; the power of negotiation of a third country, which is linked to its geopolitical importance for the EU; and its administrative capacity, which is understood as the capacity of a state to define and implement policies and to legislate and enforce the law. The work combines a comparative legal analysis of the development of the legal and policy frameworks in the cases of Morocco and Cape Verde with an empirical study of the implementation of Mobility Partnerships' projects. The analysis demonstrates that Mobility Partnerships, despite their non-binding nature, have legal and policy relevance for these third countries with regard to the regulation of migration, asylum, human trafficking and even labour law. As such, this book makes a contribution to the understanding of the interplay between the interests of EU, Member State and third country actors in the implementation of the Mobility Partnerships. The book will be a key resource for academics and students focusing on Migration Law, EU Studies, Geopolitics and African Studies. The empirical approach will also appeal to policy-makers, international organisation representatives and NGOs. This collection of critical essays considers the criminalisation of squatting from a range of different theoretical, policy and practice perspectives. While the practice of squatting has long been criminalised in some jurisdictions, the last few years have witnessed the emergence of a newly constituted political concern with unlawful occupation of land. With initiatives to address the 'threat' of squatting sweeping across Europe, the offence of squatting in a residential building was created in England in 2012. This development, which has attracted a large measure of media attention, has been widely regarded as a controversial policy departure, with many commentators, Parliamentarians, and professional organisations arguing that its support is premised on misunderstandings of the current law and a precarious evidence-base concerning the nature and prevalence of 'squatting'. Moral Rhetoric and the Criminalisation of Squatting explores the significance of measures to criminalise squatting for squatters, owners and communities. The book also interrogates wider themes that draw on political philosophy, social policy, criminal justice and the nature of ownership, to consider how the assimilation of squatting to a contemporary punitive turn is shaping the political, social, legal and moral landscapes of property, housing and crime. A 'moderately prosperous society' with no Chinese individual left behind—that's the vision for China set out by Chinese President Xi Jinping in a number of important speeches in 2017. 'Moderate' prosperity may seem like a modest goal for a country with more billionaires (609 at last count) than the US. But the 'China Story' is a complex one. The China Story Yearbook 2017: Prosperity surveys the important events, pronouncements, and personalities that defined 2017. It also presents a range of perspectives, from the global to the individual, the official to the unofficial, from mainland China to Hong Kong and Taiwan. Together, the stories present a richly textured portrait of a nation that in just forty years has lifted itself from universal poverty to (unequally distributed) wealth, changing itself and the world in the process. International economic law, with its traditional focus on large multinational enterprises, is only slowly waking up to the new reality of small and medium-sized enterprises (SMEs), entering the global marketplace. In the wake of the digital revolution, smaller companies now play an important role in the global economic landscape. In 2015 the UN expressly called for SMEs to have greater access to international trade and investment, and it is increasingly recognized that the integration of SMEs provides one of the keys to creating a more sustainable and inclusive global economy. As SMEs increasingly permeate transnational supply chains, so interactions between these companies and international economic law and policy proliferate. Small and Medium-sized Enterprises in International Economic Law offers the first comprehensive analysis of the interaction between SMEs and international economic law. This book presents a broad international perspective, gathering together contributions by leading experts from academia, legal practice, and international organizations. It opens up a field of enquiry into this so far unexplored dynamic and provide a touchstone for future debate. The analysis covers a broad spectrum of international trade and investment law focusing on issues of particular interest to SMEs, such as trade in services, government procurement, and trade facilitation. Diverse perspectives illuminate regional developments (in particular within the EU) and the implications of mega-regional free trade agreements. The essays also examine questions of legitimacy of global economic governance; in particular, concerns surrounding the threat posed to the interests of domestic SMEs by the growing liberalization of international trade and investment. These essays constitute essential reading for practitioners and academics seeking to navigate a previously neglected trend in international economic law. The United Nations Convention on the Rights of the Child is the most extensive and widely ratified international human rights treaty. This Commentary offers a comprehensive analysis of each of the substantive provisions in the Convention and its Optional Protocols on Children and Armed Conflict and the Sale of Children, Child Prostitution and Pornography. It offers a detailed insight into the drafting history of these instruments, the scope and nature of the rights accorded to children and the obligations imposed on states to secure the implementation of these rights. In doing so, it draws on the work of the Committee on the Rights of the Child, international, regional and domestic courts, academic and interdisciplinary scholarly analyses. It is of relevance to anyone working on matters affecting children including government officials, policy makers, judicial officers, lawyers, educators, social workers, health professionals, academics, aid and humanitarian workers, and members of civil society. "A Study Guide for William Keeters Maxwell Jr.'s ""So Long, See You Tomorrow""", excerpted from Gale's acclaimed Novels for Students. This concise study guide includes plot summary; character analysis; author biography; study questions; historical context; suggestions for further reading; and much more. For any literature project, trust Novels for Students for all of your research needs." The book assesses the adoption of counterterrorism measures in the Netherlands and the United States, which facilitate criminal investigations with a preventive focus (anticipative criminal investigations), from the perspective of rule of law principles. Anticipative criminal investigation has emerged in the legal systems of the Netherlands and the United States as a consequence of counterterrorism approaches where the objective of realizing terrorism prevention is combined with the objective to eventually prosecute and punish terrorists. This book has addressed this new preventive function of criminal justice and identified the rule of law principles limiting the role of criminal investigation in terrorism prevention. The possibilities and limits of criminal investigation in general and of cooperation and the division of responsibilities between law enforcement and intelligence have been addressed in a manner transcending differences between national legal systems. Valuable for academics and practitioners interested in criminal investigation, rule of law and counterterrorism. This book examines the complex and conflicting relationships between LGBT people and our cultural and heritage organisations including libraries, museums and archives. In this unique book established author John Vincent draws together current good practice, and also highlights issues which urgently still need to be addressed. To set the work of libraries, museums and archives in context, Vincent traces the development of LGBT rights in the UK. He goes on to examine some of the reasons for hostility and hatred against this minority group and critically explores provision that has been made by cultural and heritage organisations. He offers examples of good practice - not only from the UK, but from across the world - and draws up an essential 'charter' for future development. This compelling, practical book should be read by managers and staff in libraries, museums and archives around the world looking for guidance on this important issue.

Thank you very much for reading **Industrial Electronics N1 November 2011 Memo**.
