Long before a devastating earthquake hit in January 2010, Haiti was one of the most impoverished and oppressed countries in the world. However, in the late 1980s a remarkable popular mobilization known as Lavalas ("the flood") sought to liberate the island from decades of US-backed dictatorial rule. *Damming the Flood* analyzes how and why the Lavalas governments led by President Jean-Bertrand Aristide were overthrown, in 1991 and again in 2004, by the enemies of democracy in Haiti and abroad. The elaborate campaign to suppress Lavalas was perhaps the most successful act of imperial sabotage since the end of the Cold War. It has left the people of Haiti at the mercy of some of the most rapacious political and economic forces on the planet. Updated with a substantial new afterword that addresses the international response to the earthquake, *Damming the Flood* is both an invaluable account of recent Haitian history and an illuminating analysis of twenty-first-century imperialism. Most people see working to end global poverty and ensure a stable climate as a fool's errand. Add to that the Citizens United decision and the flood of money rushing into politics and the despair grows deeper. But activist and author Sam Daley-Harris has helped thousands of ordinary citizens transform from hopeless bystanders to powerful advocates. This 20th anniversary edition has a new chapter on the groundbreaking work of Citizens Climate Lobby, an increasingly powerful new advocacy group following the RESULTS model, and another new chapter on the Center for Citizen Empowerment and Transformation, a new initiative focused on spreading the original concepts developed by RESULTS. This book addresses

paradigm shifts in water policy and governance, and examines the role of civil society organizations in influencing public policy, while focusing on social equity and democratic participation. It illustrates a range of interesting developments in policy formulation, donor-state nexus, and interventions by civil society and voluntary organizations. The collection of articles provides a comprehensive and current narrative of the state-society relations in South Asia under neoliberal governance reforms, their implications and key responses with regard to water policies. Using case studies, it closely investigates the impact, effectiveness, drawbacks and challenges faced by voluntary organizations and social movements working at various levels in the water sector. The work will interest researchers and students of development studies, environmental studies, natural resource management, water governance, and public administration, as also water sector professionals, policymakers, civil society activists and governmental and non-governmental organizations. In recent years, the number of presidential declarations of "major disasters" has sky-rocketed. Such declarations make stricken areas eligible for federal emergency relief funds that greatly reduce their costs. But is federalizing the cost of disasters helping to lighten the overall burden of disasters, or is it making matters worse? Disasters and Democracy addresses the political response to natural disasters, focusing on the changing role of the federal government. Climate scientists predict increases in frequency and intensity of extreme climatic events over the next century. I used the policy change and policy learning theoretical frameworks--predominantly the advocacy coalition framework (ACF) and the focusing event literature--along with the literature on stakeholder participatory processes, to analyze what policy change occurs and what is learned as a result of experiencing extreme and damaging events. I analyze change in response to catastrophe by examining the response of national and local governments to a series of extreme floods (1998-2002) in a newly democratizing nation, Hungary. I used both qualitative analysis--examination of case studies based on data collected in semi-structured interviews with key informants in the flood and water policy domain--and quantitative analysis--based on a survey of mayors of towns (n=141) in two river basins that had experienced varying degrees of flooding. From these analyses I conclude that the experience of extreme and damaging floods alone was not sufficient to produce policy change and learning. But, a number of factors in concert with the extreme events enabled policy change to occur: (1) The process of democratization allowed alternative voices to be heard in national-level flood policy discussions. (2) A coalition of individuals and organizations espousing an ecological alternative to traditional engineering approaches to flood management that coalesced to press for policy change

after the floods occurred. (3) Key policy entrepreneurs, both inside and outside of government, enabled a radical shift in flood management toward the ecological approach. and (4) Scientific information gathered by local environmental activists facilitated in-depth discussions about flood management alternatives. In 2003 Hungary enacted a more comprehensive flood management plan that included economic development and environmental protection goals, but only the flood protection aspects of the plan had been implemented by 2007. At the local level, towns and cities adopted new policies in response to the extreme floods, but these changes focused on emergency response and flood protection policies. These findings suggest that while it may be comparatively easy to adopt new policies, changing long-held beliefs and practices about how rivers and floods should be managed is a much more difficult task. This book shows how disinformation spread by partisan organizations and media platforms undermines institutional legitimacy on which authoritative information depends. A biography of Flood, one of the most prominent members of the US House of Representatives during the twentieth century who represented Pennsylvania's 11th Congressional District for thirty-one years. The Sundering Flood is the last of a series of heroic fantasies that William Morris wrote during the final decade of his life. In it, he dramatized the democratic ideal toward which he worked in his public role as spokesman for the Socialist League. This ideal is visible from the novel's beginning, when, even though he is the youngest member of the household, Osberne's keen

sense and bravery earn him the position of family spokesman. That is not to say that there is unanimity; one man, known as Surly John, speaks out against him but is shouted down by the rest. Surly John is never punished for his opposition, illustrating Morris' view that democracy must be founded on tolerance. Later, when trouble threatens, the people hold a Thing-Mote or town meeting to select Osberne as their war leader. This is not a position Osberne seeks, but the will of the people and his own recognition of his ability are too strong for him to decline. A strict democrat might protest against the "tyranny of the majority" visible in this election, but not when the minority consists only of Surly John. In book two of Joe Nobody's highly acclaimed series, *Secession*, the Republic of Texas becomes the target of a diabolical plot hatched by international terrorists. The task of saving the new nation falls on the Texas Rangers. Zach and Sam soon find themselves embroiled in a desperate struggle to unravel the intricate scheme before the Republic is drawn into a multi-front war it cannot win. *Secession II: The Flood* is a fast-paced tale of the challenges faced by the vulnerable, fledgling democracy. Only the strength of her people and the actions of the two rangers can overcome the treachery and cutthroat politics of the global community... to ensure that the Lone Star Nation survives. Once the most lucrative European colony in the Caribbean, Haiti has long been one of the most divided and impoverished countries in the world. In the late 1980s a remarkable popular mobilization known as Lavalas, or "the flood," sought to liberate the island from decades of US-backed dictatorial rule. After winning a landslide election victory, in 1991 the Lavalas government led by President Jean-Bertrand Aristide was overthrown by a bloody military coup. *Damming the Flood* analyzes how and why Aristide's enemies in Haiti, the US and France made sure that his second government, elected with another overwhelming majority in 2000, was toppled by a further coup in 2004. The elaborate international campaign to contain, discredit and then overthrow Lavalas at the start of the twenty-first century was perhaps the most successful act of imperial sabotage since the end of the Cold War. Its execution and its impact have much to teach anyone interested in the development of today's political struggles in Latin America and the rest of the post-colonial world. The distinguished poet, novelist, and critic offers two personal meditations on the interrelationships among American democracy, conceptual and actual, the making of art, and the diminishing notion of selfhood crucial to both DIVA sociological history of flood control politics that examines how local and regional pro-growth interests organized to press the federal government to protect land from flooding, and how this action altered the relationship between regions and the federal government. *Dapper Dan Flood* explodes the myths surrounding Pennsylvania's most controversial-and colorful-congressman. Based on exhaustive research conducted in nearly twenty archives in five countries, as well as on oral histories with surviving politicians from the period, this book tells the surprising story of how the alternately self-interested and heroic resistance of the political class contributed decisively to Brazil's democratization. As they

gradually turned against military rule, politicians began to embrace a political role for the masses that most of them would never have accepted in 1964, thus setting the stage for the breathtaking expansion of democracy that Brazil enjoyed over the next three decades. With its unique blend of political history and political theory, this book is a welcome addition to the series on Politics, Culture and Society in the New Europe. Nick Hewlett begins his fascinating study with a discussion of the various ways in which the concept of democracy has been interpreted. He continues by tracing the effect of France's revolutionary tradition on the theory and practice of democracy since the Enlightenment, looking in particular at both republican democracy and direct democracy. Hewlett examines the implications for democracy of profound social and political conflict in France and offers an unusual critique of the institutions and structures of formal politics, suggesting that their relationship with democracy is more tenuous than is often assumed. The political philosophy of 'new liberals' such as Luc Ferry and Marcel Gauchet is also discussed in detail. Thought-provoking, original and closely-argued, this book explores some key aspects of politics in France whilst making a strong case for greater direct participation of ordinary people in politics. Nick Hewlett is Professor of French Studies and Director of the Centre for European Research at Oxford Brookes University. He is author of *Modern French Politics. Conflict and Consensus since 1945* (1998), co-author of *Contemporary France* (with Jill Forbes and François Nectoux, 1994 and 2001), and co-editor of *Currents in Contemporary French intellectual Life* (with Christopher Flood, 2000) and *Unity and Diversity in the New Europe* (with Barrie Axford and Daniela Berghahn, 2000). "This book examines the public life of the theatrical politician with the waxed mustache and flamboyant wardrobe. Flood's seniority on two Appropriations subcommittees enabled him to funnel funds to Pennsylvania's economically distressed 11th Congressional District. Intensely interested in foreign affairs, he surpassed most of his colleagues in the strength of his anti-Communist rhetoric. His long career ended in resignation after he was implicated in corruption allegations." "Flood was a major political figure. Although several scholars have touched on aspects of his career, Sheldon Spear has written a long overdue, full-scale biography based largely on the congressman's voluminous papers at King's College."--BOOK JACKET. Originally published: New York: Haper & Brothers Publishers, c1942. Retrospective voting may be an effective instrument for overcoming moral hazard of politicians if voters evaluate the performance of elected representatives correctly. Whether democratic experience helps them to properly assess a policymaker's performance is less well understood. We analyze whether voters are more likely to vote for an incumbent party which launched a disaster relief program and whether voters' behavior is related to their democratic experience. Our identification rests on two natural experiments: a disastrous flood in Germany in 2013, and the separation of Germany into a democratic West and a non-democratic East after World War II. We find a two percentage points increase for the incumbent party in the flooded municipalities in the East compared to the West in the 2013 elections. Testing for several potential explanations, we deem it to be likely that voters with less democratic experience are easier prey to pre-election policies of incumbent parties. A New York Times Notable Book of the Year,

winner of the Southern Book Critics Circle Award and the Lillian Smith Award. An American epic of science, politics, race, honor, high society, and the Mississippi River, *Rising Tide* tells the riveting and nearly forgotten story of the Great Mississippi Flood of 1927. The river inundated the homes of almost one million people, helped elect Huey Long governor and made Herbert Hoover president, drove hundreds of thousands of African Americans north, and transformed American society and politics forever. The flood brought with it a human storm: white and black collided, honor and money collided, regional and national powers collided. New Orleans's elite used their power to divert the flood to those without political connections, power, or wealth, while causing Black sharecroppers to abandon their land to flee up north. The states were unprepared for this disaster and failed to support the Black community. The racial divides only widened when a white officer killed a Black man for refusing to return to work on levee repairs after a sleepless night of work. In the powerful prose of *Rising Tide*, John M. Barry removes any remaining veil that there had been equality in the South. This flood not only left millions of people ruined, but further emphasized the racial inequality that have continued even to this day. In *Before the Flood* Jacob Blanc traces the protest movements of rural Brazilians living in the shadow of the Itaipu dam—the largest producer of hydroelectric power in the world. In the 1970s and 1980s, local communities facing displacement took a stand against the military officials overseeing the dam's construction, and in the context of an emerging national fight for democracy, they elevated their struggle for land into a referendum on the dictatorship itself. Unlike the broader campaign against military rule, however, the conflict at Itaipu was premised on issues that long predated the official start of dictatorship: access to land, the defense of rural and indigenous livelihoods, and political rights in the countryside. In their efforts against Itaipu and through conflicts among themselves, title-owning farmers, landless peasants, and the Avá-Guarani Indians articulated a rural-based vision for democracy. Through interviews and archival research—including declassified military documents and the first-ever access to the Itaipu Binational Corporation—*Before the Flood* challenges the primacy of urban-focused narratives and unearths the rural experiences of dictatorship and democracy in Brazil. **NEW YORK TIMES BESTSELLER** • "Vital reading for Americans and people anywhere who seek to understand what is happening 'after the fall' of the global system created by the United States" (*New York Journal of Books*), from the former White House aide, close confidant to President Barack Obama, and author of *The World as It Is At a time when democracy in the United States is endangered as never before*, Ben Rhodes spent years traveling the world to understand why. He visited dozens of countries, meeting with politicians and activists confronting the same nationalism and authoritarianism that are tearing America apart. Along the way, he discusses the growing authoritarianism of Vladimir Putin, and his aggression towards Ukraine, with the foremost opposition leader in Russia, who was subsequently poisoned and imprisoned; he profiled Hong Kong protesters who saw their movement snuffed out by China under Xi Jinping; and America itself reached the precipice of losing democracy before giving itself a fragile second chance. The characters and issues that Rhodes illuminates paint a picture that shows us where we are today—from Barack

Obama to a rising generation of international leaders; from the authoritarian playbook endangering democracy to the flood of disinformation enabling authoritarianism. Ultimately, Rhodes writes personally and powerfully about finding hope in the belief that looking squarely at where America has gone wrong can make clear how essential it is to fight for what America is supposed to be, for our own country and the entire world. *JUST FOR YOU CLEAN SPIRIT!
