Simply put, a Business Rule is a statement that defines or constrains some aspect of the business. In practice they are meant to reduce or eliminate the delays, waste, and frustration associated with the IT department having to be involved with almost every action affecting an organization's information systems. The advent of Web services has created renewed interest in them. There are now several well established rules-based products that have demonstrated the effectiveness of their use. But until now there has not been a definitive guide to Business Rules. Ron Ross, considered to be the father of Business Rules, will help organizations apply this powerful solution to their own computer system problems. This book is intended to be the first book that anyone from an IT manager to a business manager will read to understand what Business Rules are, and what how they can be applied to their own situation. Making Hypermedia Work: A User's Guide to HyTime discusses how the HyTime standard can be applied to real world problems of navigating from here to there in collections of documents. The HyTime standard itself provides enabling method and templates for various information structures such as links and various kinds of location indicators. A HyTime application specifies how a group applies those templates to their particular requirements. This involves choosing which HyTime structures are needed, setting up conventions for how they are to be used and setting up management and processes for creation, conversion and update of hypermedia documents. A HyTime engine is the last ingredient: actually using an application typically involves choosing software to support one's use of HyTime and customizing it as needed. This may be as simple as setting up hypertextual style sheets that determine how links and other things look and act. More specialized applications may require full-scale design and programming. Making Hypermedia Work: A User's Guide to HyTime presents the first in-depth guide to the HyTime specifications, both describing its key features and providing guidelines on how it is used. The book begins with the more familiar structures of books, graphics and cross-references, detailing the HyTime constructs and models used to identify, locate, and link data. It goes on to introduce some of HyTime's mechanisms for linking multidimensional, multimedia data, and for scheduling it in space and time. The authors help the reader become fluent in HyTime as it applies to the simpler and most widely understood data types. After mastering this level of HyTime, readers will be ready and able to explore the exciting potential of HyTime for more sophisticated multimedia applications.
