This book informs and supports medical educators and clinic leaders regarding the key clinical and administrative components necessary to run an academic medical practice. From a group of expert faculty from the Society of General Internal Medicine (SGIM) with years of experience in managing academic medical practices, this manual offers comprehensive guidance to the clinic director regarding critical factors involved with running an academic medical practice including, but not limited to: compliance with Accreditation Council for Graduate Medical Education (ACGME) requirements, clinic orientation and curricula implementation, clinic workflow challenges, billing, coding, and the Primary Care Exception Rule, productivity metrics and quality indicators, evaluation and feedback for trainees, faculty, and clinic staff, implementation of a Patient Centered Medical Home (PCMH), development of controlled substance prescribing policies, medical student involvement in resident clinics, and Veteran Affairs practices and non-traditional care settings. The scope of this book is sufficiently broad to be comprehensive and practical while still anticipating the further evolution of the academic medical practice in the years to come. Each chapter focuses on a particular aspect of clinic leadership and will offer real-world examples and management "pearls" for the clinic director. Chapters highlight common challenges and solutions and should be useful across disparate practice settings. This is an ideal resource for clinic directors, core faculty, and clinic leadership in academic outpatient medical practices, particularly those within the field of

first truly comprehensive clinical reference to enhancing the health care and wellness of LGBT patients. Written by leading experts in the field and created in conjunction with Fenway Community Health of Boston, one of America's most respected community-based research and treatment centers, this one-of-a kind resource examines the unique issues faced by sexual minority patients and provides readers with clear and authoritative guidance. The intent of this study was to develop and apply a model for analyzing health care provider productivity in the Internal Medicine Outpatient Clinic at General Leonard Wood Army Community Hospital. The delivery of health care today is subject to significant financial constraints. As Rex Conn and associates note, identification of the actual costs associated with providing medical services has become increasingly important in order to prudently allocate available resources, with the ultimate cost savings occurring when a service is simply made unavailable. Enhanced resource utilization can be experienced by gaining knowledge of the productivity levels of health care services being provided in a Medical Treatment Facility and making management decisions accordingly. (sdw). Now for the first time, a new diagnosis and treatment guide with even more focus on the most commonly encountered disorders than ever before. All major internal medicine diseases and disorders are covered in this new succinct evidence-based guide to treatment and diagnosis in internal medicine. For the 10th edition, contributors were asked to map chapters according to ABIM goals. At least 50

percent of the material is new, with the remainder changed and updated. The redesign is intended to cover all ABIM goals while streamlining the text to make it more user-friendly. Large chapters have been broken up into smaller content-oriented chapters to facilitate shorter, more focused study opportunities. This book is divided into subspecialty topics (eg, allergy, cardiology, dermatology, etc) and cross-content topics related to general internal medicine (eg, men's health, women's health, geriatrics, etc). Questions and answers have been pulled from the main text to a companion book of Q&As to facilitate study. This updated text offers preparation for board certification and recertification exams in internal medicine. It features new chapters on medical genetics and neurology, and major revisions and additions to chapters on liver disorders, fluid and electrolyte abnormalities, breast cancer, coronary artery disease and medical diseases in pregnancy. The pulmonary medicine board simulation chapter has also been extensively revised. The authors of each chapter have increasingly used bulleted points, clinical case vignettes and review exercises to convey important clinical pearls. The model examines utilization expense for lab, x-ray and pharmacy services ordered for outpatients in Brooke Army Medical Center's Internal Medicine Clinic during the 3rd & 4th quarter of FY 1998. Data regarding 26,502 individual patient-provider encounters were extracted from both the Composite Health Care System (CHCS) and Ambulatory Data System (ADS) computer databases. Data extracts were then loaded into a PC database management system for subsequent relational integration, organization and statistical analysis. Case-mix adjustment was accomplished by selecting internists and internal medicine residents and a single primary diagnosis. Second level case mix adjustment accounted for other quantifiable variables using a multiple regression model identify% variables having a statistically significant relationship with the total ancillary expense. Variables accounted for diversity among patients, providers, and individual encounter acuity. Profiling was accomplished showing dispersion of lab, x-ray and pharmacy expense for each provider as predicted by the multiple regression model. Significant variables were patient

beneficiary category, number of comorbid diagnoses, and the consistency of seeing the same provider; significant provider variables were professional status and experience. A surprising finding was that neither patient age, sex, or RVU intensity were significant determinants of expense. Co-authored by a neurologist, a psychiatrist, and a pulmonologist, *Sleep Medicine in Clinical Practice* reflects the cross-disciplinary nature in the clinical management of sleep disorders. The authors present an overview of sleep medicine including the physiological basis of sleep, diagnostic tools and possible therapeutic strategies, emphasizing throughout the role of the clinician in diagnosing and managing disease. A practical reference for the busy physician, *Sleep Medicine in Clinical Practice* includes chapters on the assessment and diagnosis of sleep disorders, conditions such as narcolepsy and sleep apnea, the management of insomnia and a selection on co-existent neurologic conditions such as epilepsy and dementia. It will be of interest to sleep medicine specialists and trainees as well as neurologists, pulmonologists, psychiatrists and internists.
