Nature-Based Solutions and Water Security: An Action Agenda for the 21st Century presents an action agenda for natural infrastructure on topics of standards and principles, technical evaluation and design tools, capacity building and innovative finance. Chapters introduce the topic and concepts of natural infrastructure, or nature-based solutions (NBS) and water security, with important background on the urgency of the global water crisis and the role that NBS can, and should play, in addressing this crisis. Sections also present the community of practice's collective thinking on a prioritized action agenda to guide more rapid progress in mainstreaming NBS. With contributions from global authors, including key individuals and organizations active in developing NBS solutions, users will also find important conclusions and recommendations, thus presenting a collaboratively developed, consensus roadmap to scaling NBS. Covers all issues of water security and natural infrastructures Presents a comprehensive state of synthesis, providing readers with a solid grounding in the field of natural infrastructures and water security Includes a fully workable and intuitive roadmap for action that is presented as a guide to the most important actions for practitioners, research questions for academics, and information on promising careers for students entering the field This book documents nearly 500 US and Canadian locations where wildlife refuges, nature preserves, and similar properties protect natural sites that lie within the North American Great Plains, from Canada's Prairie Provinces to the Texas-Mexico border. Information on site location, size, biological diversity, and the presence of especially rare or interesting flora and fauna are mentioned, as well as driving directions, mailing addresses, and phone numbers or internet addresses, as

available. US federal sites include 11 national grasslands, 13 national parks, 16 national monuments, and more than 70 national wildlife refuges. State properties include nearly 100 state parks and wildlife management areas. Also included are about 60 national and provincial parks, national wildlife areas, and migratory bird sanctuaries in Canada's Prairie Provinces. Many public-access properties owned by counties, towns, and private organizations are also described. From the High Plains of the Panhandle to the tropics of the south, Texas is great for car camping weekends. In a modern world often dominated by big cities, big concrete, and little computer screens, *Best Tent Camping: Texas* by Wendel Withrow is not only a guidebook, but it's also an escape manual for all nature lovers who dare to dream of a different existence. This book will help the reader navigate the back roads of Texas to find those special locales that will give the overworked, overstressed city dweller 50 special places to recharge his or her head, heart, and soul. This fully updated and now full color guidebook provides detailed campground maps, key information (such as facility details, fees, restrictions), driving directions, a rating system (subjective, of course), and, most importantly, firsthand information about which sites provide the best tent camping experience to avoid the R.V. scene as much as possible. To help make the perfect campground easy to find, the guide is divided into the major geographical areas of Texas and provides cross-referencing for parks that emphasize certain activities. Traveling thousands of miles across the huge expanse of Texas, Wendel visited each campground to report up-to-date and accurate information for the next tent camper who is looking for that special place of solitude and comfort. Based on more than 30 years of following the little-known back roads of Texas, the individual park and site descriptions will give you a head start on where to put down those tent stakes for a night or a week (if you are lucky enough to really slow down the hectic pace that most of us seem forced to keep). The book also contains local history, local attractions, camping tips, and recommended reading material to enhance your knowledge of the area or expand your understanding of Texas's natural features. Inspiring people to care about the planet. This online-only edition of *ESSENTIALS OF ECOLOGY, 8E*, brings you the inspiration and knowledge you need to make a difference in solving today's environmental issues. MindTap Environmental Science for Miller/Spoolman's *ESSENTIALS OF ECOLOGY, 8th Edition*, helps you learn on your terms. **INSTANT ACCESS IN YOUR POCKET.** Take advantage of the MindTap Mobile App to learn on your terms. Read or listen to textbooks and study with the aid of instructor notifications, flashcards, and practice quizzes. **MINDTAP HELPS YOU CREATE YOUR OWN POTENTIAL. GEAR UP FOR ULTIMATE SUCCESS.** Track your scores and stay motivated toward your goals. Whether you have more work to do or are ahead of the curve, you'll know where you need to focus your efforts. And the MindTap Green Dot P™ will charge your confidence along the way. **MINDTAP HELPS YOU OWN YOUR PROGRESS. MAKE YOUR TEXTBOOK YOURS.** No one knows what works for you better than you. Highlight key text, add notes, and create custom flashcards. When it's time to study, everything you've flagged or noted can be gathered into a guide you can organize. **Important Notice:** Media content referenced within the product description or the product text may not be available in the ebook version. This conference proceeding LNCS 12203 constitutes the refereed proceedings of the 12th International Conference on Cross-Cultural Design, CCD 2020, held as part of HCI International 2020 in Copenhagen, Denmark in July 2020. The conference was held virtually due to the corona pandemic. The total of 1439 papers and 238 posters included in the 40 HCII 2020 proceedings volumes was carefully reviewed and selected from 6326 submissions. The regular papers of DAPI 2020, Distributed, Ambient and Pervasive Interactions, presented in this volume were organized in topical sections named: Design Approaches, Methods and Tools, Smart Cities and Landscapes, Well-being, Learning and Culture in Intelligent Environments and much more. The nation's rivers connect mountains to sea, communities to natural places, and people to wildlife. America's Wild & Scenic River system recognizes these values. Paddling America provides descriptions for paddling and exploring 50 Wild and Scenic Rivers across the country. Woven throughout the river descriptions will be small

anecdotal sidebars touching on the history of the Wild & Scenic Rivers Act, the adventurers themselves, and tips for paddling. Each chapter will contain one map, specifications in accordance with paddling guidelines including GPS coordinates, put-in/takeout information, an overview of the paddle, miles and directions, full-color photos, and sidebars. "Wild New Jersey brings the reader on a real-life safari through the Garden State's wildlife and natural wonders."-Tom Gilmore, President, New Jersey Audubon Society "Once you read this book, don't be surprised if you find yourself going straight to the nearest outdoor adventure, whether it be boating and birding the Meadowlands, hiking the Appalachian Trail, or exploring the Pinelands."-Captain Bill Sheehan, Hackensack Riverkeeper "What is wonderful about this book is it shows we still have wild places left even in the middle of our state's most developed urban areas. This book captures why we must preserve what's left of nature in New Jersey-and it reads like page-turner you can't put down."-Jeff Tittel, Director, New Jersey Sierra Club "Full of exciting tales about New Jersey, from the crowded urban areas to the most remote places of the state."-Joanna Burger, author of A Naturalist Along the New Jersey Shore The fastest animal on earth dive-bombs him from the skies. A young black bear bounds up a mountain trail a few yards away. Poisonous snakes swirl at his feet. A thousands bats careen past his head in a pitch-black roost. Pods of dolphins swim right past him by the scores. Who? Experienced naturalist David Wheeler. Where? Inside the pages of Wild New Jersey, of course. Count on this to be the first nature book to paint the extraordinary picture of New Jersey's unlikely wilderness in all its glory. A celebration of athleticism, wisdom, and skill—Women Who Hike profiles over twenty of America's most inspiring women adventurers ranging from legends to the rising stars of today. The book is both inspirational and aspirational as each adventurer tells her story in her own words through featuring their favorite hike, highlighting personal challenges, accomplishments, and philosophy, as well as providing readers with practical how-to suggestions on maximizing not only their own potential in hiking but in life. The profiles are complemented by stunning color photographs. Each profile includes a map of the hike being profiled, hike specs, miles and directions, GPS coordinates to the trailhead, and a sidebar of something noteworthy about the hike, the location, or the adventurer. Featured adventurers: 1. Ingrid Backstrom 2. Teresa Baker 3. Gina Bégin 4. Katie Boué 5. Jainee Dial & Lindsey Elliott 6. Caroline Gleich 7. Sarah Herron 8. Shanti Hodges 9. Kristen Hostetter 10. Jen Hudak 11. Rue Mapp 12. Hilary Oliver 13. Haley Robison 14. Elyse Rylander 15. Shawnté Salabert 16. Ambreen Tariq 17. Kalen Thorien 18. Mirna Valerio 19. Jolia Varela 20. Pamela Zoolalian Advances in network connectivity, power consumption, and physical size create new possibilities for using interactive computing outdoors. However, moving computing outdoors can drastically change the human outdoor experience. This impact is felt in many kinds of outdoor activities such as citizen science, personal recreation, search and rescue, informal education, and others. It is also felt across outdoor settings that range from remote wilderness to crowded cities. Understanding these effects can lead to ideas, designs and systems that improve, rather than diminish, outdoor experiences. This book represents the current results emerging from recent workshops focused on HCI outdoors and held in conjunction with CHI, GROUP, UbiComp, and MobileHCI conferences. Based on feedback at those workshops, and outreach to other leaders in the field, the chapters collected were crafted to highlight methods and approaches for understanding how technologies such as handhelds, wearables, and installed standalone devices impact individuals, groups, and even communities. These findings frame new ways of thinking about HCI outdoors, explore logistical issues associated with moving computing outdoors, and probe new experiences created by involving computing in outdoor pursuits. Also important are the ways that social media has influenced preparation, experience, and reflection related to outdoor experiences. HCI Outdoors: Theory, Design, Methods and Applications is of interest to HCI researchers, HCI practitioners, and outdoor enthusiasts who want to shape future understanding and current practice related to technology in every kind of outdoor experience. 700+ Previous years General Awareness questions of SSC CGL/SSC

CHSL/SSC MTS/SSC Sub-Inspector/SC Stenographer exams (2015-2019) provides the General Knowledge and General Science questions that have appeared in the various SSC Exams. The book will provide you an idea of the scope of the questions that are asked in the SSC exams. What we see through our windshields reflects ideas about our national identity, consumerism, and infrastructure. For better or worse, windshields have become a major frame for viewing the nonhuman world. The view from the road is one of the main ways in which we experience our environments. These vistas are the result of deliberate historical forces, and humans have shaped them as they simultaneously sought to be transformed by them. In Consuming Landscapes, Thomas Zeller explores how what we see while driving reflects how we view our societies and ourselves, the role that consumerism plays in our infrastructure, and ideas about reshaping the environment in the twentieth century. Zeller breaks new ground by comparing the driving experience and the history of landscaped roads in the United States and Germany, two major automotive countries. He focuses specifically on the Blue Ridge Parkway in the United States and the German Alpine Road as case studies. When the automobile was still young, an early twentieth-century group of designers—landscape architects, civil engineers, and planners—sought to build scenic infrastructures, or roads that would immerse drivers in the landscapes that they were traversing. As more Americans and Europeans owned cars and drove them, however, they became less interested in enchanted views; safety became more important than beauty. Clashes between designers and drivers resulted in different visions of landscapes made for automobiles. As strange as it may seem to twenty-first-century readers, many professionals in the early twentieth century envisioned cars and roads, if properly managed, as saviors of the environment. Consuming Landscapes illustrates how the meaning of infrastructures changed as a result of use and consumption. Such changes indicate a deep ambivalence toward the automobile and roads, prompting the question: can cars and roads bring us closer to nature while deeply altering it at the same time? Social unrest, political activism, worry about human impact on this earth—sound familiar? In 1969, British Columbians were facing concerns that are still making headlines today. At the end of a decade of changing technological and political landscapes associated with draft dodgers, hippie flower power and the rise of the counterculture, a group of serious-minded citizens created Sierra Club BC to protect and preserve wild places in the province. From that moment, Sierra Club BC played an important role in many of the environmental issues in the province, from the protection of the Nitinat Triangle and the West Coast Trail in 1972; to the 1993 War in the Woods, the largest act of civil disobedience in Canadian history; to a twenty-year campaign that culminated in protection of the Great Bear Rainforest; to the ongoing opposition to the Site C Dam and the Trans Mountain pipeline. In fifty years, the club has helped to convince governments on both sides of the political spectrum to protect 15 per cent of BC's land base and just over 3 percent of BC's marine areas from development. Still active today, Sierra Club BC has thousands of members, volunteers and supporters, all working to protect the province's wild areas and confront climate change. Diane Pinch's non-fiction homage to Sierra Club BC provides an overview of the lasting impact the group has had, not only in BC, but in all of Canada. Replete with first-hand accounts, maps and photos, the book is a heartfelt in-depth look at environmentalism in Western Canada through the years, from the perspective of one of the most influential groups in operation. Sierra Club BC's philosophy of "passion and persistence" and commitment to science-based evidence and peaceful activism have given the club its incredible staying power. A new vision is sweeping through ecological science: The dense web of dependencies that makes up an ecosystem has gained an added dimension—the dimension of time. Every field, forest, and park is full of living organisms adapted for relationships with creatures that are now extinct. In a vivid narrative, Connie Barlow shows how the idea of "missing partners" in nature evolved from isolated, curious examples into an idea that is transforming how ecologists understand the entire flora and fauna of the Americas. This fascinating book will enrich and deepen the experience of anyone who

enjoys a stroll through the woods or even down an urban sidewalk. But this knowledge has a dark side too: Barlow's "ghost stories" teach us that the ripples of biodiversity loss around us now are just the leading edge of what may well become perilous cascades of extinction. The rivers of America flow from mountains, forests, and grasslands with astonishing beauty, essential to all life. Many of the best of these streams have been safeguarded under the National Wild and Scenic Rivers Act of 1968--America's premier program for the protection of our finest natural waterways. Wild and Scenic Rivers celebrates this creative conservation initiative with 160 stunning photographs and a lively history involving citizen activists, scientists, dedicated public officials, and enlightened political leaders. In commemoration of the 50th anniversary of the National Wild and Scenic Rivers Act, award-winning author and photographer Tim Palmer illuminates the values of this irreplaceable system of free-flowing streams, probes its problems, and addresses its future. With a depth of experience dating almost to the inception of the wild and scenic rivers program, Palmer has captured the splendor and essence of our most extraordinary rivers with his camera, and he has told their remarkable story as no one else could do. Arranged logically to follow the most widely adopted course structure, this text will leave students with a full understanding of the unique structure, function, and living patterns of all vertebrates. Provides aspiring engineers with pertinent information and technological methodologies on how best to manage industry's modern-day environment concerns This book explains why industrial environmental management is important to human environmental interactions and describes what the physical, economic, social, and technological constraints to achieving the goal of a sustainable environment are. It emphasizes recent progress in life-cycle sustainable design, applying green engineering principles and the concept of Zero Effect Zero Defect to minimize wastes and discharges from various manufacturing facilities. Its goal is to educate engineers on how to obtain an optimum balance between environmental protections, while allowing humans to maintain an acceptable quality of life. Industrial Environmental Management: Engineering, Science, and Policy covers topics such as industrial wastes, life cycle sustainable design, lean manufacturing, international environmental regulations, and the assessment and management of health and environmental risks. The book also looks at the economics of manufacturing pollution prevention; how eco-industrial parks and process intensification will help minimize waste; and the application of green manufacturing principles in order to minimize wastes and discharges from manufacturing facilities. Provides end-of-chapter questions along with a solutions manual for adopting professors Covers a wide range of interdisciplinary areas that makes it suitable for different branches of engineering such as wastewater management and treatment; pollutant sampling; health risk assessment; waste minimization; lean manufacturing; and regulatory information Shows how industrial environmental management is connected to areas like sustainable engineering, sustainable manufacturing, social policy, and more Contains theory, applications, and real-world problems along with their solutions Details waste recovery systems Industrial Environmental Management: Engineering, Science, and Policy is an ideal textbook for junior and senior level students in multidisciplinary engineering fields such as chemical, civil, environmental, and petroleum engineering. It will appeal to practicing engineers seeking information about sustainable design principles and methodology. The Rocky Mountains are renowned for rugged grandeur, but the rivers flowing off the peaks are just as extraordinary in their beauty, nature, and allure. Tim Palmer reveals these natural wonders with their irresistible opportunities for paddling in swift currents and hiking along scenic shores with Field Guide to Rivers of the Rocky Mountains. He guides readers across Colorado, Idaho, Montana, and Wyoming in this essential and inspiring reference for residents of the Rockies and visitors alike. Look inside to find: Detailed descriptions of 70 rivers Paddling difficulty and trail locations Directions to landings and trailheads Natural science and conservation history 200 brilliant photos by the author Maps locating all rivers This practice manual provides a handy reference to both Ohio's state environmental laws and to the state's regulatory

obligation to comply with applicable federal laws. Written by the environmental practice group at Thompson Hine LLP, the practice manual is designed to complement Anderson's OhioEPA Laws and Regulations, a three volume publication that contains all Ohio statutory and regulatory provisions related to programs overseen by the Ohio Environmental Protection Agency. Chapters include a background on the subject, a variety of practical advice, checklists to guide users through the maze of environmental regulations, and legal strategies and tips for dealing with particular fact patterns. The manual explains Ohio's changing water property rights system and how it interacts with regulation, public trust rights, and pending Great Lakes initiatives. The manual also provides a comprehensive update on the Voluntary Action Program, the funding options for brownfields programs, and other developments affecting the remediation and redevelopment of brownfields. Air quality is also covered, including Ohio EPA's efforts to bring Ohio into compliance with National Ambient Air Quality Standards. There is also a chapter on state and federal energy initiatives and climate change. Understanding deserts and drylands is essential, as arid landscapes cover >40% of the Earth and are home to two billion people. Today's problematic environment-human interaction needs contemporary knowledge to address dryland complexity. Physical dimensions in arid zones—land systems, climate and hazards, ecology—are linked with social processes that directly impact drylands, such as land management, livelihoods, and development. The challenges require integrated research that identifies systemic drivers across global arid regions. Measurement and monitoring, field investigation, remote sensing, and data analysis are effective tools to investigate natural dynamics. Equally, inquiry into how policy and practice affect landscape sustainability is key to mitigating detrimental activity in deserts. Relations between socio-economic forces and degradation, agro-pastoral rangeland use, drought and disaster and resource extraction reflect land interactions. Contemporary themes of food security, conflict, and conservation are interlinked in arid environments. This book unifies desert science, arid environments, and dryland development. The chapters identify land dynamics, address system risks and delineate human functions through original research in arid zones. Mixed methodologies highlight the vital links between social and environmental science in global deserts. The book engages with today's topical themes and presents novel analyses of arid land systems and societies. The original, most complete and most up-to-date guide for mariners to the coasts of Norway, Svalbard (Spitsbergen), and the west coast of Sweden. Continuously updated since 1978. Over 950 pages in five volumes. 1000 ports and anchorages. Tips on cruising northern destinations gathered by the authors during 35 years and 150,000 miles of North Atlantic cruising. Insider's perspective from Norwegian authors Hans Jakob and Eli gathered in 45 years of cruising Norway. Planning maps and over 1200 photographs. 2019 Update adds: 10 new harbours, 100 updated harbours, over 200 new photos and 50 new pages. New feature: 85 harbour and anchorage charts. Includes a harbours and anchorages waypoint file for loading into your plotter or navigation software. This is a fixed layout guide book and so best viewed on tablets although phones will work, particularly larger ones. Can also be viewed in a browser on a computer, but links do not work (Google limitation). Featuring monstrous horizontal roofs, beautiful clean aretes, shear faces, and perfect boulders, the Obed is a sandstone climber's paradise. Located in rural northeastern Tennessee, this Wild & Scenic playground also welcomes you with a mellow climber-friendly campground, fabulous swimming holes, and stunning vistas. Described for the first time in a dedicated color guidebook by longtime local developer Kelly Brown, The Obed: A Climber's Guide to the Wild and Scenic will reveal to you the secrets of this world-class climbing destination. This book presents case studies that share important experiences regarding Integrated Water Resource Management (IWRM) in various countries. Following an introduction to theoretical concepts, responsibilities, and challenges, the subsequent chapters address, among other topics, an analysis of policies and regulations for water management in Brazil, the drivers that led California to adapt to the IWRM framework, and the international regulations for water markets and water banking in Australia and Chile.

The implications of climate change for water resource systems in Mexico are discussed, as well as management strategies from California that could potentially serve as IWRM adaptation schemes in Mexico. Critical cases from Guanacaste (Costa Rica), and from Zayandehrud River Basin and Lake Urmia (Iran) are reviewed in terms of management practices and solutions. The book also provides an overview of the current availability and use of water resources in South Korea, and discusses the management of and international water law instruments for transboundary groundwater in Africa. In a world where habitats are constantly changing and the impact of anthropization on the environment is increasingly intense, interactions between human and wildlife are becoming more and more complex. Some species pose problems for human activities while many others need to be helped in order to continue to exist. This book follows the first volume called 'Problematic Wildlife', edited by F.M. Angelici and published by Springer in 2016, which has had considerable success with readers and critics. The volume includes 21 chapters divided into 7 parts devoted specific topics which are approached in a multidisciplinary way. There are both review chapters and specific cases, always bearing in mind the interest for an international audience. The book is useful both for scientists, wildlife specialists, conservationists, zoologists, ecologists, university students, nature managers, and for those who live in contact with wildlife and its problems, such as farmers, shepherds, hunters, urban planners, and staff of parks and nature reserves. Its ultimate goal is to offer scientific and pragmatic approaches to manage each categories of problematic species. The Salient Features of the 6th edition of the book: 1. Comprehensive Sections on: Quantitative Aptitude, General Intelligence & Reasoning, English Comprehension and General Knowledge & Awareness; 2. Detailed theory along with solved examples and short-cuts to solve problems; 3. Exhaustive question bank at the end of each chapter in the form of Exercise. Solutions to the Exercise have been provided at the end of the chapter. 4. Solved Question paper of 2018, 2017 & 2016. 5. The book provides thoroughly updated General Awareness section with Current Affairs. The Grand Canyon has been saved from dams three times in the last century. Unthinkable as it may seem today, many people promoted damming the Colorado River in the canyon during the early twentieth century as the most feasible solution to the water and power needs of the Pacific Southwest. These efforts reached their climax during the 1960s when the federal government tried to build two massive hydroelectric dams in the Grand Canyon. Although not located within the Grand Canyon National Park or Monument, they would have flooded lengthy, unprotected reaches of the canyon and along thirteen miles of the park boundary. Saving Grand Canyon tells the remarkable true story of the attempts to build dams in one of America's most spectacular natural wonders. Based on twenty-five years of research, this fascinating ride through history chronicles a hundred years of Colorado River water development, demonstrates how the National Environmental Policy Act came to be, and challenges the myth that the Sierra Club saved the Grand Canyon. It also shows how the Sierra Club parlayed public perception as the canyon's savior into the leadership of the modern environmental movement after the National Environmental Policy Act became law. The tale of the Sierra Club stopping the dams has become so entrenched—and so embellished—that many historians, popular writers, and filmmakers have ignored the documented historical record. This epic story puts the events from 1963-1968 into the broader context of Colorado River water development and debunks fifty years of Colorado River and Grand Canyon myths. How it is that the United States—the country that cherishes the ideal of private property more than any other in the world—has chosen to set aside nearly one-third of its land area as public lands? Now in a fully revised and updated edition covering the first years of the Trump administration, Randall Wilson considers this intriguing question, tracing the often-forgotten ideas of nature that have shaped the evolution of America's public land system. The result is a fresh and probing account of the most pressing policy and management challenges facing national parks, forests, rangelands, and wildlife refuges today. The author explores the dramatic story of the origins of the public domain, including the century-long effort to sell off land and the subsequent

emergence of a national conservation ideal. Arguing that we cannot fully understand one type of public land without understanding its relation to the rest of the system, he provides in-depth accounts of the different types of public lands. With chapters on national parks, national forests, wildlife refuges, Bureau of Land Management lands, and wilderness areas, Wilson examines key turning points and major policy debates for each land type, including recent Trump Administration efforts to roll back environmental protections. He considers debates ranging from national monument designations and bison management to gas and oil drilling, wildfire policy, the bark beetle epidemic, and the future of roadless and wilderness conservation areas. His comprehensive overview offers a chance to rethink our relationship with America's public lands, including what it says about the way we relate to, and value, nature in the United States. Environmental law has aesthetic dimensions. Aesthetic values have shaped the making of environmental law, and in turn such law governs many of our nature-based sensory experiences. Aesthetics is also integral to understanding the very fabric of environmental law, in its institutions, procedures and discourses. *The Art of Environmental Law*, the first book of its kind, brings new insights into the importance of aesthetic issues in a variety of domains of environmental governance around the world, from climate change to biodiversity conservation. It also argues for aesthetics, and relatedly the arts, to be taken more seriously in the practice of environmental law so as to improve our emotional and ethical capacities to address the upheavals of the Anthropocene. Jules V. Tileston, a longtime manager at U.S. federal and Alaska state land agencies, acted as an expert specialist on river status and public land use and consulted on the establishment of the federal Wild and Scenic Rivers Act. The U.S. Bureau of Land Management (BLM) and the Alaska Department of Natural Resources re-examined the rationale for designating the Fortymile River for status in the National Wild and Scenic Rivers (WSR) System in 1972. He visited the Fortymile region several times and was the lead author of the 1973 draft and the 1974 final environmental statements for the proposed Fortymile National Wild and Scenic River, which recommended inclusion for that designation. In this report, the author re-evaluates his conclusions and recommendations made in 1970 to 1974. Had he known that most of the Fortymile River and its principal tributaries would be excluded from ANILCA, or that in 2016, BLM would determine regulated mining is not compatible with the Fortymile WSR Lands, the Fortymile River likely would not have been selected as a potential Wild and Scenic River--and if it had been, the boundaries and river segment classifications definitely would have been different. The author's professional recommendation is to change the boundaries and segment classifications to fit the 2018 observed conditions in and adjacent to the Fortymile WSR Lands.
