Modeling: Gateway to the Unknown Mar 09 2022 Edited by Daniel Rothbart of George Mason University in Virginia, this book is a collection of Rom Harré's work on modeling in science (particularly physics and psychology). In over 28 authored books and 240 articles and book chapters, Rom Harré of Georgetown University in Washington, DC is a towering figure in philosophy, linguistics, and social psychology. He has inspired a generation of scholars, both for the ways in which his research is carried out and his profound insights. For Harré, the stunning discoveries of research demand a kind of thinking that is found in the construction and control of models. Iconic modeling is pivotal for representing real-world structures, explaining phenomena, manipulating instruments, constructing theories, and acquiring data. This volume in the new Elsevier book series Studies in Multidisciplinary includes major topics on the structure and function of models, the debates over scientific realism, explanation through analogical modeling, a metaphysics for physics, the rationale for experimentation, and modeling in social encounters. * A multidisciplinary work of sweeping scope about the nature of science * Revolutionary interpretation that challenges conventional wisdom about the character of scientific thinking * Profound insights about fundamental challenges to contemporary physics * Brilliant discoveries into the nature of social interaction and human identity * Presents a rational conception of methods for acquiring knowledge of remote regions of the world * Written by one of the great thinkers of our time.

Determinants and Controls of Scientific Development Feb 08 2022 This book constitutes the outcome of an international conference held at the Otto-Mobes-Volkswirtschaftsschule, Graz-Stiftung (Austria), from June 16 to 22, 1974. The conference was initiated by a project group working on determinants and controls of social science development at the Institute for Advanced Studies and Scientific Research in Vienna and organized by the editors of this volume. It was held under the auspices of the Austrian Ministry of

Science and Research. The main topics of the conference were those at the forefront of the 'state of argumentation' (to borrow from one of our contributors) in philosophy and sociology of science ever since the controversy between Thomas S. Kuhn and Sir Karl R. Popper has sharpened our awareness for the methodological and substantial presuppositions involved with questions of growth and development in science. Let us give two examples of those topics. The borderline between sociology of science and philosophy of science has become more and more unclear; while the work of at least some philosophers of science comes to have an empirical flavour, sociologists of science are increasingly apt to include logical and methodological components of the research process as their objects of examination. Papers included in this volume testify to both tendencies.

Design Methodologies for Space Transportation Systems Feb 20 2023 Annotation "Design Methodologies for Space Transportation Systems is a sequel to the author's earlier text, "Space Transportation: A Systems Approach to Analysis and Design. Both texts represent the most comprehensive exposition of the existing knowledge and practice in the design and project management of space transportation systems, and they reflect a wealth of experience by the author with the design and management of space systems. The text discusses new conceptual changes in the design philosophy away from multistage expendable vehicles to winged,

reusable launch vehicles and presents an overview of the systems engineering and vehicle design process as well as systems trades and analysis. Individual chapters are devoted to specific disciplines such as aerodynamics, aerothermal analysis, structures, materials, propulsion, flight mechanics and trajectories, avionics and computers, and control systems. The final chapters deal with human factors, payload, launch and mission operations, safety, and mission assurance. The two texts by the author provide a valuable source of information for the space transportation community of designers, operators, and managers. A companion CD-ROM succinctly packages some oversized figures and tables, resources for systems engineering and launch ranges, and a compendium of software programs. The computer programs include the USAF AIRPLANE AND MISSILE DATCOM CODES (with extensive documentation); COSTMODL for software costing; OPGUID launch vehicle trajectory generator; SUPERFLO-a series of 11 programs intended for solving compressible flow problems in ducts and pipes found in industrial facilities; and a wealth of Microsoft Excel spreadsheet programs covering the disciplines of statistics, vehicle trajectories, propulsion performance, math utilities,

Military Operations from Kosovo to Kabul Nov 24 2020 In this highly unusual role for a lawyer, the author found himself in 1998 having to learn on his feet at a frightening pace as the newly promoted senior legal advisor to the charismatic General Sir Mike Jackson, the commander who led the Allied Rapid Reaction Corps

into strife-torn Kosovo the following year to restore some sort of normality in the aftermath of the NATO bombing campaign. A peace deal was finally signed, only for Russia to intervene at the eleventh hour. The author was asked to provide rules of engagement for NATO to eject a stubborn Russian unit from Pristina by force, amongst fears of starting World War III, one of the few occasions when he thought perhaps civilian legal practice might not have been such a bad idea after all. Ten years later the author was back at HQ ARRC, promoted to Colonel. The culture shock on this occasion was not so much, spending six months in Afghanistan as being professionally embedded in a large American military legal office led by a hyper energetic US officer from the 'deep south'. Unlike the short, sharp Kosovo experience in central Europe, this war in central Asia was the longest in the history of the USA, although for the British it was just the latest in a succession of operations going back two centuries to the 'Great Game'. Trying to apply the law, balancing the need for aggression with compliance with Western notions of human rights, and vain efforts to win over the hearts and minds of a proud but impoverished people historically blighted by conflict proved to be unimaginably fraught. Military Operations From Kosovo to Kabul is one experienced soldier's fascinating account of these historic events, seen on the ground from the perspective of a legal professional, seldom associated with fighting wars.
